feedback from students and my own teaching style Eventually I had a completely customized presentation of the entire course and students began asking for a text that more closely adhered to the presentations I was making in class While on vacation in Santa Fe New Mexico I woke up early one morning and decided to write down some thoughts on binary logic During the vacation I completed the chapter save some editing With one down I thought I would create at least a collection of three binary numbers binary logic and binary representations Then I decided I would write two chapters on programming C and assembly that would parallel each other and could be reinforced with weekly programming projects By then I had covered most of the course and it was a matter of filling in the gaps For students who have no experience in computer programming I think you will find this text provides a useful understanding of computers and programming that can be a foundation for your future classes If you are not going to pursue computer science as a career you may find yourself using some of what is taught here in any career that uses computers For students who have some experience with computer programming some of the programming topics discussed in this text may be a bit redundant however your previous programming classes likely focused on application development The use of the C programming language and assembly language in this text is geared more toward systems programming Unlike application programming systems programming is more tied to the underlying hardware architecture than application programming Because of this systems programming and assembly language help reinforce an understanding of computer architecture
