Simunic,2024-12-12 The financial information provided to governments creditors investors etc by businesses has been verified by auditors since ancient times In its modern form the independent public accounting profession has its roots in 19th century Scotland A distinctive feature of this profession is that

it consists of private for profit businesses operating as sole practitioners partnerships but mostly as large accounting firms The question naturally arises why should users of financial information provided by private for profit firms place trust in the verification of that information by other private for profit firms This is the interesting and complex economic issue that underlies research in what has come to be called the economics of auditing The author is one of the first researchers in this area This book traces the development of this important stream of research that applies economic analysis to the study of financial statement audits by professional public accounting firms It offers a narrative commentary along with a series of previously unpublished papers that the author presented during the 1970 s at Accounting Research workshops at the University of Chicago as part of his dissertation research that ultimately led to one of the bedrock papers in the field It provides an explanation and discussion of the economic regulatory and research environment at that time The book concludes with a discussion of important but currently unanswered questions in the field that flow from the author s thesis research but remain unresolved It will be of significant interest to advanced students and academics who are engaged in developing their own research programs as well as to any researcher who is working in the area of the economics of auditing
