A Mind for Language Harry van der Hulst, 2023-09-21 How does human language arise in the mind To what extent is it innate or something that is learned How do these factors interact The questions surrounding how we acquire language are some of the most fundamental about what it means to be human and have long been at the heart of linguistic theory This book provides a comprehensive introduction to this fascinating debate unravelling the arguments for the roles of nature and nurture in the knowledge that allows humans to learn and use

language An interdisciplinary approach is used throughout allowing the debate to be examined from philosophical and cognitive perspectives It is illustrated with real life examples and the theory is explained in a clear easy to read way making it accessible for students and other readers without a background in linguistics An accompanying website contains a glossary questions for reflection discussion themes and project suggestions to further deepen students understanding of the material

Languages, Automata and Groups Ian M. Chiswell, 2008-11-14 This book is based on notes for a master's course given at Queen Mary University of London in the 1998-9 session. Such courses in London are quite short and the course consisted essentially of the material in the first three chapters together with a two-hour lecture on connections with group theory. Chapter 5 is a considerably expanded version of this. For the course the main sources were the books by Hopcroft and Ullman [20] by Cohen [4] and by Epstein et al [7]. Some use was also made of a later book by Hopcroft and Ullman [21]. The ulterior motive in the first three chapters is to give a rigorous proof that various notions of recursively enumerable language are equivalent. Three such notions are considered. These are generated by a type 0 grammar, recognised by a Turing machine (deterministic or not) and defined by means of a Gödel numbering having defined recursively enumerable for sets of natural numbers. It is hoped that this has been achieved without too many arduous arguments using complicated notation. This is a problem with the entire subject and it is important to understand the idea of the proof which is often quite simple. Two particular places that are heavy going are the proof at the end of Chapter 1 that a language recognised by a Turing machine is type 0 and the proof in Chapter 2 that a Turing machine computable function is partial recursive.
