

Chapter 10.10 From DNA to Protein Synthesis

Problems

What percentage of total cell protein is protein?

Background

Genetic proteins are the main structural components of living cells. In addition, they have the catalytic and regulatory functions of the living "factory". First, the specific sequence of amino acids in the polypeptide chain determines the biological activity. Second, the amino acid sequence determines the three-dimensional structure of the polypeptide chain. The polypeptide chain is synthesized from amino acids in the cytoplasm of the cell.

Explain how you will understand the synthesis of proteins when you finish this assignment.
