Complex Variables with Applications Saminathan Ponnusamy, Herb Silverman, 2007-05-26 Explores the interrelations between real and complex numbers by adopting both generalization and specialization methods to move between them while simultaneously examining their analytic and geometric characteristics Engaging exposition with discussions remarks questions and exercises to motivate understanding and critical thinking skills Encludes numerous examples and applications relevant to science and engineering students

Theory of Functions of a Complex Variable Alekseĭ Ivanovich Markushevich, 1965

Introduction to the Division by Zero Calculus SABUROU SAITOH, 2021-02-04 The common sense on the division by zero with the long and mysterious history is wrong and our basic idea on the space around the point at infinity is also wrong since Euclid On the gradient or on differential coefficients we have a great missing since $\tan^2 0 = 0$ Our mathematics is also wrong in elementary mathematics on the division by zero In this book in a new and definite sense we will show and give various applications of the division by zero $0 \neq 0$ $1 \neq 0$ $z \neq 0$ In particular we will introduce several fundamental concepts in calculus Euclidean geometry analytic geometry complex analysis and differential equations We will see new properties on the Laurent expansion singularity derivative extension of solutions of differential equations beyond analytical and isolated singularities and reduction problems of differential equations On Euclidean geometry and analytic geometry we will find new fields by the concept of the division by zero We will collect many concrete properties in mathematical sciences from the viewpoint of the division by zero We will know that the division by zero is our elementary and fundamental mathematics

Square Matrices of Order 2 Vasile Pop, Ovidiu Furdui, 2017-04-04 This unique and innovative book presents an exciting and complete detail of all the important topics related to the theory of square matrices of order 2 The readers exploring every detailed aspect of matrix theory are gently led toward understanding advanced topics They will follow every notion of matrix theory with ease accumulating a thorough understanding of algebraic and geometric aspects of matrices of order 2 The prime jewel of this book is its offering of an unusual collection of problems theoretically motivated most of which are new original and seeing the light of publication for the first time in the literature Nearly all of the exercises are presented with detailed solutions and vary in difficulty from easy to more advanced Many problems are particularly challenging These and not only these invite the reader to unleash their creativity and research capabilities and to discover their own methods of attacking a problem Matrices have a vast practical importance to mathematics science and engineering therefore the readership of this book is intended to be broad high school students wishing to learn the fundamentals of matrix theory first year students who like to participate in mathematical competitions graduate students who want to learn more about an application of a certain technique doctoral students who are preparing for their prelim exams in linear algebra and linear algebra instructors Chapters 1 3 complement a standard linear algebra course Pure and applied mathematicians who use matrix theory for their applications will find this book useful as a refresher In fact anyone who is willing to explore the

methodologies discussed in this book and work through a collection of problems involving matrices of order 2 will be enriched

Introductory Complex Analysis Richard A. Silverman, 2013-04-15 Shorter version of Markushevich's Theory of Functions of a Complex Variable appropriate for advanced undergraduate and graduate courses in complex analysis More than 300 problems some with hints and answers 1967 edition

Potential Theory and Dynamics on the Berkovich Projective Line Matthew Baker, Robert S. Rumely, 2010-03-10 The purpose of this book is to develop the foundations of potential theory and rational dynamics on the Berkovich projective line over an arbitrary complete algebraically closed non Archimedean field In addition to providing a concrete and elementary introduction to Berkovich analytic spaces and to potential theory and rational iteration on the Berkovich line the book contains applications to arithmetic geometry and arithmetic dynamics A number of results in the book are new and most have not previously appeared in book form Three appendices on analysis \mathbb{R} trees and Berkovich's general theory of analytic spaces are included to make the book as self contained as possible The authors first give a detailed description of the topological structure of the Berkovich projective line and then introduce the Hsia kernel the fundamental kernel for potential theory Using the theory of metrized graphs they define a Laplacian operator on the Berkovich line and construct theories of capacities harmonic and subharmonic functions and Green's functions all of which are strikingly similar to their classical complex counterparts After developing a theory of multiplicities for rational functions they give applications to non Archimedean dynamics including local and global equidistribution theorems fixed point theorems and Berkovich space analogues of many fundamental results from the classical Fatou Julia theory of rational iteration They illustrate the theory with concrete examples and exposit Rivera Letelier's results concerning rational dynamics over the field of p adic complex numbers They also establish Berkovich space versions of arithmetic results such as the Fekete Szego theorem and Bilu's equidistribution theorem

Geometry and Topology of Manifolds: Surfaces and Beyond Vicente Muñoz, Ángel González-Prieto, Juan Ángel Rojo, 2020-10-21 This book represents a novel approach to differential topology Its main focus is to give a comprehensive introduction to the classification of manifolds with special attention paid to the case of surfaces for which the book provides a complete classification from many points of view topological smooth constant curvature complex and conformal Each chapter briefly revisits basic results usually known to graduate students from an alternative perspective focusing on surfaces We provide full proofs of some remarkable results that sometimes are missed in basic courses e.g the construction of triangulations on surfaces the classification of surfaces the Gauss Bonnet theorem the degree genus formula for complex plane curves the existence of constant curvature metrics on conformal surfaces and we give hints to questions about higher dimensional manifolds Many examples and remarks are scattered through the book Each chapter ends with an exhaustive collection of problems and a list of topics for further study The book is primarily addressed to graduate students who did take standard introductory courses on algebraic topology differential and Riemannian geometry or algebraic geometry but have not seen their deep interconnections which permeate a

modern approach to geometry and topology of manifolds

The Richness of the History of Mathematics Karine Chemla, José Ferreirós, Lizhen Ji, Erhard Scholz, Chang Wang, 2023-11-27 This book a tribute to historian of mathematics Jeremy Gray offers an overview of the history of mathematics and its inseparable connection to philosophy and other disciplines Many different approaches to the study of the history of mathematics have been developed Understanding this diversity is central to learning about these fields but very few books deal with their richness and concrete suggestions for the what why and how of these domains of inquiry The editors and authors approach the basic question of what the history of mathematics is by means of concrete examples For the how question basic methodological issues are addressed from the different perspectives of mathematicians and historians Containing essays by leading scholars this book provides a multitude of perspectives on mathematics its role in culture and development and connections with other sciences making it an important resource for students and academics in the history and philosophy of mathematics

Zeta and q-Zeta Functions and Associated Series and Integrals Hari M Srivastava, Junesang Choi, 2011-10-11 Zeta and q Zeta Functions and Associated Series and Integrals is a thoroughly revised enlarged and updated version of Series Associated with the Zeta and Related Functions Many of the chapters and sections of the book have been significantly modified or rewritten and a new chapter on the theory and applications of the basic or q extensions of various special functions is included This book will be invaluable because it covers not only detailed and systematic presentations of the theory and applications of the various methods and techniques used in dealing with many different classes of series and integrals associated with the Zeta and related functions but stimulating historical accounts of a large number of problems and well classified tables of series and integrals Detailed and systematic presentations of the theory and applications of the various methods and techniques used in dealing with many different classes of series and integrals associated with the Zeta and related functions

Mental Health Services: A Public Health Perspective Bruce Lubotsky Levin MD, Kevin D. Hennessy, John Petrila JD, LLM, 2010-07-30 This revised and expanded third edition text utilizes a public health framework and the latest epidemiological treatment and service systems research to promote a comprehensive understanding of the organization financing and delivery of mental health and substance abuse services in the United States Written by national experts in the field this timely work will provide policymakers administrators clinicians and public health and behavioral health graduate students with the knowledge base needed to manage and transform mental health service systems both nationally and locally The book is unique in providing a public health framework of the most significant issues facing mental health policy makers administrators planners and practitioners It combines issues e g evaluation law ethnicity that extend across different age groups treatment settings and disorders with issues that are population and disorder specific The publication of this book is timely for those involved with the debate over national health care reform legislation and provides important and timely information on populations at risk for mental disorders services and systems issues for those responsible for implementing policies and programs resulting from
