Science and Technology of Concrete Admixtures Pierre-Claude Aïtcin,Robert J Flatt,2015-11-12 Science and Technology of Concrete Admixtures presents admixtures from both a theoretical and practical point of view The authors emphasize key concepts that can be used to better understand the working mechanisms of these products by presenting a concise overview on the fundamental behavior of Portland cement and hydraulic binders as well as their chemical admixtures also discussing recent effects in concrete in terms of rheology mechanics durability and sustainability but never forgetting the fundamental role played by the water binder ratio and proper curing in concrete technology Part One presents basic knowledge on Portland cement and concrete while Part Two deals with the chemical and physical background needed to better understand what admixtures are chemically and through which mechanism they modify the properties of the fresh and hardened concrete Subsequent sections present discussions on admixtures technology and two particular types of concrete self consolidating and ultra high strength concretes with final remarks on their future Combines the knowledge of two leading authors to present both the scientific and technology of admixtures Explains what admixtures are from a chemical point of view and illustrates by which mechanisms they modify the properties of fresh and hardened concrete Presents a

fundamental practical and innovative reference book on the topic Contains three detailed appendices that can be used to learn how to use admixtures more efficiently *Biochar-Based Cement and Concrete for Sustainable Construction* Daniel C.W. Tsang,Xiaohong Zhu,2025-10-01 In response to the urgent need for achieving carbon neutrality in the construction industry with Biochar Based Cement and Concrete for Sustainable Construction an international group of experts has set out to provide a timely comprehensive overview of biochar enhanced cementitious materials Although the method is relatively new extensive research has been conducted in recent years to systematically gather information proving biochar as an ideal medium for carbon sequestration when used as an engineered additive in cementitious materials but also to strengthen concrete in many key dimensions via enhancements to hydration and integration into the hardened matrix The volume stands out as an invaluable resource that offers up to date guidance on eco efficient construction materials manufacturing and practical application examples backed by considerations regarding their environmental soundness At the same time it stimulates research into future developments with relevance to interdisciplinary audiences both in academia and industry Focuses on biochar for construction spotlighting its utilization as a promising investment to contribute to sustainable development Covers macro and micro properties of biochar to demonstrate that not only can it serve as a filler but also as a functionalized additive Illustrates state of the art application achievements of biochar based cementitious materials and concrete
