programming language just like any language requires time to be fluent in. While learning a language like Spanish or French allows us to interact with people from that country, programming languages allow us to interact with computers by giving us the ability to write instructions that computers can understand and execute. Why would we want or need to do this? Look around you. Whether you are sitting in an office, a living room, a doctor's office, a vehicle, wherever you are, you are absolutely surrounded by technology and computers. When you think about it, not being able to communicate with the immense amount of computers around you seems almost irresponsible. This is one of the many reasons why learning one, two, or 10 programming languages is one of the quickest ways to make sure you're on top of the pile in this new computer-driven world.

Released by Sun Microsystems in 1995, Java is famous for its portability, security, and robustness. It remains one of the most favorable programming languages over two decades later. Whether you are a complete novice and/or well-acquainted with other programming languages, this book should provide an exhaustive introduction to the ins and outs of Java. Even if you have never touched a computer, at the time you start this book, we hope by the final chapter you will be capable of navigating the complex world of Java programming. It may seem daunting, but take it slow and give it a chance, and you will be making your own programs in no time. Java is used to manage technologies and advanced systems throughout the world, and by learning how to manipulate the many powerful tools found within Java, you'd put yourself at the forefront of a rapidly developing world that is fully dependent on coding.

Welcome to a new world. You must learn: What software do you need to code Java programs? What are arrays and lists? How to install and run JDK and NetBeans? How to format Java strings? How to write your own classes? How to use control flow statements in Java? Familiarize yourself with decisions, conditions, statements, and information overload. Differentiate between loops and arrays, objects and classes, methods and variables. Find links to additional resources. Even if you have no idea how JavaScript works, this is the right guide for you.
