Extreme Multivalued Waves as a Model of Everything Shamil Usmanovich Galiev, 2025-02-19 The purpose of the book is a mathematical and experimental study of extreme multivalued waves based on scalar field equations It is known that Einstein tried to build a unified interdisciplinary field theory that would unite all interactions in Nature into a single system The book uses this idea supplemented by the idea that all fundamental interactions have a wave resonant nonlinear nature The theoretical foundation of the book also consists of the results of Leonard Euler Fundamental questions about the polysemy of Nature are considered On this basis various highly nonlinear wave processes are modeled ranging from waves in resonators and ocean waves to descriptions of particle waves the origin of the Universe and data from double slit experiments Gravitational and inertial effects are associated with solutions of relativistic wave equations According to the book the unsolved nature of some fundamental problems in physics is explained by the nonlinear and resonant nature of the world around us which exists in a non smooth and inhomogeneous space time We do not know how strong the influence of multivalued wave processes on the Universe is This book is the first attempt to assess this influence At the same time the extreme waves considered in this book may be applied to different technologies and systems ranging from the atomic scale to the cosmos With this book the author celebrates the 100th anniversary of the beginning of the development of quantum mechanics and modern cosmology
