Test Equating Michael J. Kolen, Robert L. Brennan, 2013-11-11 In recent years many researchers in the psychology and statistical communities have paid increasing attention to test equating as issues of using multiple test forms have arisen and in response to criticisms of traditional testing techniques This book provides a practically oriented introduction to test equating which both discusses the most frequently used equating methodologies and covers many of the practical issues involved The main themes are the purpose of equating distinguishing between equating and related methodologies the importance of test equating to test development and quality control the differences between equating properties equating designs and equating methods equating error and the underlying statistical assumptions for equating The authors are acknowledged experts in the field and the book is based on numerous courses and seminars they have presented As a result educators psychometricians professionals in measurement statisticians and students coming to the subject for the first time as part of their graduate study will find this an invaluable text and reference

Test Equating, Scaling, and Linking Michael J. Kolen, Robert L. Brennan, 2013-03-14 Test equating methods are used with many standardized tests in education and psychology to ensure that scores from multiple test forms can be used interchangeably In recent years researchers from the education psychology and statistics communities have contributed to the rapidly growing statistical and psychometric methodologies used in test equating This book provides an introduction to test equating which both discusses the most frequently used equating methodologies and covers many of the practical issues involved This second edition expands upon the coverage of the first edition by providing a new chapter on test scaling and a second on test linking Test scaling is the process of developing score scales that are used when scores on standardized tests are reported In test linking scores from two or more tests are related to one another Linking has received much recent attention due largely to investigations of linking similarly named tests from different test publishers or tests constructed for different purposes The expanded coverage in the second edition also includes methodology for using polytomous item response theory in equating The themes of the second edition include the purposes of equating scaling and linking and their practical context data collection designs statistical methodology designing reasonable and useful equating scaling and linking studies importance of test development and quality control processes to equating equating error and the underlying statistical assumptions for equating Given the perennial debates about academic standards and grade inflation it is my view that tools such as those described in this book should be adopted much more widely by the academic community than they are at present This book provides an excellent overview and I strongly recommend it Short Book Reviews of the ISI April 2005 I highly recommend this book to everybody who has any interest in equating and linking be they a student practitioner or researcher Psychometrika 2006

Applying Test Equating Methods Jorge González,Marie Wiberg,2017-03-06 This book describes how to use test equating methods in practice The non commercial software R is used throughout the book to illustrate how to perform different equating methods when scores data are collected under different data collection designs such as equivalent groups design single group design counterbalanced design and non equivalent groups with anchor test design The R packages equate kequate and SNSequate among others are used to practically illustrate the different methods while simulated and real data sets illustrate how the methods are conducted with the program R The book covers traditional equating methods including mean and linear equating frequency estimation equating and chain equating as well as modern equating methods such as kernel equating local equating and combinations of these It also offers chapters on observed and true score item response theory equating and discusses recent developments within the

equating field More specifically it covers the issue of including covariates within the equating process the use of different kernels and ways of selecting bandwidths in kernel equating and the Bayesian nonparametric estimation of equating functions It also illustrates how to evaluate equating in practice using simulation and different equating specific measures such as the standard error of equating percent relative error different that matters and others

Machine Learning, Natural Language Processing, and Psychometrics Hong Jiao, Robert W. Lissitz, 2024-04-01 With the exponential increase of digital assessment different types of data in addition to item responses become available in the measurement process One of the salient features in digital assessment is that process data can be easily collected This non conventional structured or unstructured data source may bring new perspectives to better understand the assessment products or accuracy and the process how an item product was attained The analysis of the conventional and non conventional assessment data calls for more methodology other than the latent trait modeling Natural language processing NLP methods and machine learning algorithms have been successfully applied in automated scoring It has been explored in providing diagnostic feedback to test takers in writing assessment Recently machine learning algorithms have been explored for cheating detection and cognitive diagnosis When the measurement field promote the use of assessment data to provide feedback to improve teaching and learning it is the right time to explore new methodology and explore the value added from other data sources This book presents the use cases of machine learning and NLP in improving the assessment theory and practices in high stakes summative assessment learning and instruction More specifically experts from the field addressed the topics related to automated item generations automated scoring automated feedback in writing explainability of automated scoring equating cheating and alarming response detection adaptive testing and applications in science assessment This book demonstrates the utility of machine learning and NLP in assessment design and psychometric analysis
