

Chapter 22: Descent with Modification: A Darwinian View of Life

As you study this chapter, read several paragraphs at a time to catch the flow of ideas and understand the reasoning that is being described. In some places, the text describes a narrative or story of events that led to Darwin's theory of evolution. Therefore, first read the narrative to absorb the big picture and then return to answer the few questions that accompany this material.

Overview

1. Define *evolution* broadly and then give a narrower definition, as discussed in the overview.

Evolution: Descent with modification; the idea that living species are descendants of ancestral species that were different from the present-day ones, also defined more narrowly as the change in the genetic composition of a population from generation to generation

Concept 22.1 The Darwinian revolution challenged the traditional view of a young Earth inhabited by unchanging species

This section takes a look at the historical setting and influences on Darwin, and it sets the stage for our formal study of evolution.

2. How did each of the following sources view the origin of species?

Aristotle and Scala Naturae: Aristotle viewed species as fixed. Through his observations of nature, Aristotle recognized "affinities" among organisms. He concluded that life-forms could be arranged on a ladder, or scale, of increasing complexity, called the *scala naturae*. Each form, perfect and permanent, had its allotted rung on this ladder.

The Old Testament: The Old Testament holds that species were individually designed by God and therefore perfect.

Carolus Linnaeus: Linnaeus adopted a nested classification system, grouping similar species into increasingly general categories. Linnaeus, adhering to the Old Testament belief that all species were designed by God, did not ascribe the resemblances among species to evolutionary kinship, but rather to the pattern of their creation.

3. Explain the role of *fossils* in *rock strata* as a window to life in earlier times.

Many fossils are found in sedimentary rocks formed from the sand and mud that settle to the bottom of seas, lakes, swamps, and other aquatic habitats. New layers of sediment cover older ones and compress them into superimposed layers of rock called *strata*. The fossils in particular strata provide a glimpse of some of the organisms that populated Earth at the time that the layer formed.

4. How would Georges Cuvier have explained the appearance of the record of life shown in the rock strata?

Cuvier opposed the idea of evolution. He advocated *catastrophism*, the principle that events in the past occurred suddenly and were caused by mechanisms different from those operating in the present.
