#### ATA5723/ATA5724/ATA5728

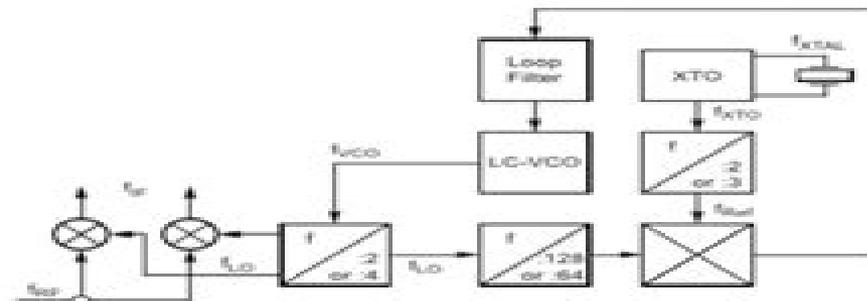

### Introduction

The UHF receiver ATA5723, ATA5724, and ATA5728 are designed specially for automotive application like Remote Keyless Entry as well as Tire Pressure Monitoring System. These receivers are upgrades of ATA5743 and ATA5760. They have compatible pinning that allows the development of one layout for applications in three different ISM (Industrial Scientific Medical) frequency bands. The frequency ranges are 312.5MHz to 317.5MHz, 431.5MHz to 436.5MHz and 868MHz to 870MHz. Another benefit of the receiver is the reuse of the software from Atmel's older receiver, the ATA5743. Additional features include the RSSI output, the pierce crystal oscillator achieving a better oscillation margin, an improved sensitivity as well as the image rejection.

The purpose of this application note is to give a designer some hints how to start developing a receiver module with ATA5723/ATA5724/ATA5728.

AVR RISC Microcontroller Handbook Claus Kuhnel,1998-10-02 The AVR RISC Microcontroller Handbook is a comprehensive guide to designing with Atmel's new controller family which is designed to offer high speed and low power consumption at a lower cost. The main text is divided into three sections: hardware which covers all internal peripherals; software which covers programming and the instruction set; and tools which explains using Atmel's Assembler and Simulator available on the Web as well as IAR's C compiler. Practical guide for advanced hobbyists or design professionals. Development tools and code available on the Web.

**The Art of Hardware Architecture** Mohit Arora,2011-10-09 This book highlights the complex issues, tasks, and skills that must be mastered by an IP designer in order to design an optimized and robust digital circuit to solve a problem. The techniques and methodologies described can serve as a bridge between specifications that are known to the designer and RTL code that is final outcome, reducing significantly the time it takes to convert initial ideas and concepts into right first time silicon. Coverage focuses on real problems rather than theoretical concepts with an emphasis on design techniques across various aspects of chip design.

**Advanced Data Acquisition and Intelligent Data Processing** Vladimir Haasz, Kurosh Madani,2022-09-01 DAQ and data processing is a basic part of all automated production systems, diagnostic systems, watching over quality of production, energy distribution, transport control, or in various other areas. Demands on the speed, accuracy, and reliability increase in general. It is possible to achieve not only using superior but also more expensive hardware but also applying advanced data acquisition and intelligent data processing. It deals e.g. optimal data fusion of a number of sensors, new stochastic methods for accuracy increasing, new algorithms for acceleration of data processing, etc. These are the grounds for publishing this book. Advanced Data Acquisition and Intelligent Data Processing offers 10 up-to-date examples of different applications of advanced data acquisition and intelligent data processing used in monitoring, measuring, and diagnostics systems. The book arose based on the most interesting papers from this area published at IDAACS 2013 conference. However, the individual chapters include not only designed solution in wider context but also relevant theoretical parts, achieved results, and possible future ways. Technical topics discussed in this book include advanced methods of data acquisition in application that are not routine, measured data fusion using up-to-date advanced data processing, nonlinear dynamical systems identification, multidimensional image processing. Advanced Data Acquisition and Intelligent Data Processing is ideal for personnel of firms, deals with advanced instrumentation, energy consumption monitoring, environment monitoring, non-destructive diagnostics, robotics, etc. as well as academic staff and postgraduate students in electrical control and computer engineering.
