Arc Routing Moshe Dror, 2000-08-31 Arc Routing Theory Solutions and Applications is about arc traversal and the wide variety of arc routing problems which has had its foundations in the modern graph theory work of Leonhard Euler Arc routing methods and computation has become a fundamental optimization concept in operations research and has numerous applications in transportation telecommunications manufacturing the Internet and many other areas of modern life The book draws from a variety of sources including the traveling salesman problem TSP and graph theory which are used and studied by operations research engineers computer scientists and mathematicians In the last ten years or so there has been extensive coverage of arc routing problems in the research literature especially from a graph theory perspective however the field has not had the benefit of a uniform systematic treatment With this book there is now a single volume that focuses on state of the art exposition of arc routing problems that explores its graph theoretical foundations and that presents a number of solution methodologies in a variety of application settings Moshe Dror has succeeded in working with an elite group of ARC routing scholars to develop the highest quality treatment of the current state of the art in arc routing

Application of Heuristics and Metaheuristics to the Capacitated Arc Routing Problem

Problem Carlos Ernesto Guillemot Gascón,2010 The purpose of this thesis is to study arc routing problems and design metaheuristic methods in order to provide high quality solutions to existing problems focusing on the Capacitated Arc Routing Problem The first part of the thesis will contain a literature study on vehicle routing problems and the existing methodology used to solve them In the practical part first a simple greedy algorithm is going to be used to get some starting results Afterwards the objective will be designing and implementing heuristics and metaheuristics in search of the better solutions The results are going to be analysed and compared between them and also with other methods that already exist in the literature

Arc Routing : Problems, Applications and Algorithms

Horst A. Eiselt,Michel Gendreau,Gilbert Laporte,Centre for Research on Transportation (Montréal, Québec),1992 *Network Routing* Michael O. Ball,1995-10-30 The papers in this volume consider a general area of study known as network routing The underlying problems are conceptually simple yet mathematically complex and challenging How can we best route material or people from one place to another Or how can we best design a system for instance locate facilities to provide

services and goods as efficiently and equitably as possible The problems encountered in answering these questions often have an underlying combinatorial structure for example either we dispatch a vehicle or we do not or we use one particular route or another The problems also typically have an underlying network structure a communication or transportation network In addition models for these problems are often very large with hundreds or thousands of constraints and variables A companion volume in the Handbook series entitled Network Models treats basic network models such as minimum cost flows matching and the travelling salesman problem as well as several complex network topics not directly related to routing such as network design and network reliability

Introduction to Logistics Systems Planning and Control

Gianpaolo Ghiani,Gilbert Laporte,Roberto Musmanno,2004-01-26 Publisher Description **Modeling and Control in Environmental Issues 2001** Akira Sano,S. Nishioka,Shūzō Nishioka,Hiroyuki Tamura,2002 Environmental issues is one of the significantly important subjects to be solved on a global scale for attaining sustainable developments in the new century A major feature of environmental issues is that studies on environments are interdisciplinary and should deal with complex and heterogeneous systems which include chemical physical and biological phenomena and further socio economical activities and technology developments for energy saving and CO 2 emission reduction The workshop provided the forum for presentation of new developments in the important interdisciplinary field of environmental systems involving the application of concepts methods and techniques of modeling and control The aim was to review state of the art systems and control approaches exchange new results in interdisciplinary fields and look at feasible developments to the future The scope of this workshop covered various aspects of systems and control approaches to environmental issues Environmental assessment Systems approaches to environmental management and strategies Modeling of global warming and impact analysis on socio structure Modeling of

ecological systems Control and optimization of environmental quantities System reform and integration for environments Advanced control technology for reduction of energy consumption and CO₂ emission Cogeneration systems Control systems approaches to clean energy Fuel cells and their applications Systems Integration technologies in urban planning Systems modeling and data analysis in life cycle assessment Manufacturing in symbiosis with environments Modeling and control of waste incineration plant Water quality control and waste water management Other related topics *An Integrated Systems Approach to the Development of Winter Maintenance*, 2006 Winter road maintenance operations require many complex strategic and operational planning decisions The five primary problems involved in this intricate planning procedure include locating depots designing sectors routing service vehicles scheduling vehicles and configuring the vehicle fleet The complexity involved in each of these decisions has resulted mainly in research that approaches each of the problems separately and sequentially which can lead to isolated and suboptimal solutions After discussing the complexity of the relaxed subproblems that would need to be solved to optimize the intricate winter maintenance operations the research turns to a heuristic approach to more feasibly address the interrelated problems This report subsequently presents a systematic heuristic based optimization approach to integrate the winter road maintenance planning decisions for depot location sector design vehicle route design vehicle scheduling and fleet configuration The approach presented is illustrated through an example of public sector winter road maintenance planning for a rural transportation network in Boone County Missouri When applied to the real world winter road maintenance planning problems for Boone County the methodology delivered very promising results The solution methodology successfully achieves the objective of a more integrated and less sequential approach to the problems considered The integrated solution would allow the Missouri Department of Transportation MoDOT to maintain the same high level of service with significantly fewer resources The results indicate that this methodology is a successful step towards solving realistic multiple depot problems involving heterogeneous winter maintenance fleets
