Turbulence and Self-Organization Mikhail Ya Marov,Aleksander V. Kolesnichenko,2013-01-16 The book deals with the development of continual models of turbulent natural media Such models serve as a ground for the statement and numerical evaluation of the key problems of the structure and evolution of the numerous astrophysical and geophysical objects The processes of ordering self organization in an originally chaotic turbulent medium are addressed and treated in detail with the use of irreversible thermodynamics and stochastic dynamics approaches which underlie the respective models Different examples of ordering set up in the natural environment and outer space are brought and thoroughly discussed the main focus being given to the protoplanetary discs formation and evolution

The Statistical Mechanics of Irreversible

Phenomena Pierre Gaspard,2022-07-28 This book provides a comprehensive and self contained overview of recent progress in nonequilibrium statistical mechanics in particular the discovery of fluctuation relations and other time reversal symmetry relations The significance of these advances is that nonequilibrium statistical physics is no longer restricted to the linear regimes close to equilibrium but extends to fully nonlinear regimes These important new results have inspired the development of a unifying framework for describing both the microscopic dynamics of collections of particles and the macroscopic hydrodynamics and thermodynamics of matter itself The book discusses the significance of this theoretical framework in relation to a broad range of nonequilibrium processes from the nanoscale to the macroscale and is essential reading for researchers and graduate students in statistical physics theoretical chemistry and biological physics
