Complexity and Geographical Economics Pasquale Commendatore, Saime Kayam, Ingrid Kubin, 2015-02-17 The uneven geographical distribution of economic activities is a huge challenge worldwide and also for the European Union In Krugman's New Economic Geography economic systems have a simple spatial structure This book shows that more sophisticated models should visualise the EU as an evolving trade network with a specific topology and different aggregation levels At the highest level economic geography models give a bird eye view of spatial dynamics At a medium level institutions shape the economy and the structure of financial and labour markets At the lowest level individual decisions interact with the economic social and institutional environment the focus is on firms decision on location and innovation Such multilevel models exhibit

complex dynamic patterns path dependence cumulative causation hysteresis on a network structure and specific analytic tools are necessary for studying strategic interaction heterogeneity and nonlinearities
