Inductive Biases in Machine Learning for Robotics and Control Michael Lutter, 2023-07-31 One important robotics problem is How can one program a robot to perform a task Classical robotics solves this problem by manually engineering modules for state estimation planning and control In contrast robot learning solely relies on black box models and data This book shows that these two approaches of classical engineering and black box machine learning are not mutually exclusive To solve tasks with robots one can transfer insights from classical robotics to deep networks and obtain better learning algorithms for robotics and control To highlight that incorporating existing knowledge as inductive biases in machine learning algorithms improves performance this book covers different approaches for learning dynamics models and learning robust control policies The presented algorithms leverage the knowledge of Newtonian Mechanics Lagrangian Mechanics as well as the Hamilton Jacobi Isaacs differential equation as inductive bias and are evaluated on physical robots
