Mechatronics Question Answers:

Mechatronic Futures Peter Hehenberger, David Bradley, 2016-06-10 Offering a comprehensive overview of the challenges risks and options facing the future of mechatronics this book provides insights into how these issues are currently assessed and managed Building on the previously published book *Mechatronics in Action* it identifies and discusses the key issues likely to impact on future mechatronic systems It supports mechatronics practitioners in identifying key areas in design modeling and technology and places these in the wider context of concepts such as cyber physical systems and the Internet of Things For educators it considers the potential effects of developments in these areas on mechatronic course design and ways of integrating these Written by experts in the field it explores topics including systems integration design modeling privacy ethics and future application domains Highlighting novel innovation directions it is intended for academics engineers and students working in the field of mechatronics particularly those developing new concepts methods and ideas

Advances and Impacts of the Theory of Inventive Problem Solving Sebastian Koziółek, Leonid Chechurin, Mikael Collan, 2018-11-29 This book offers a collection of cutting edge research on the Theory of Inventive Problem Solving TRIZ Introduced by Genrich Altshuller in 1956 TRIZ has since been used by engineers inventors and creators as an essential structured innovation method at businesses and organizations around the globe The chapters of this book showcase work by selected authors from the TRIZ Future conferences which are organized by the European TRIZ Association ETRIA The chapters reflect an international mix of new ideas on TRIZ and knowledge based innovation highlight recent advances in the TRIZ community and provide examples of successful collaboration between industry and academia The book first introduces the reader to recent methodological innovations then provides an overview of established and new TRIZ tools followed by a collection of case studies and examples of TRIZ implementation in various scientific and social contexts

Analyzing and Modeling Interdisciplinary Product Development Frank Neumann, 2015-09-30 Frank Neumann focuses on establishing a theoretical basis that allows a description of the interplay between individual and collective processes in product development For this purpose he introduces the integrated descriptive model of knowledge creation as the first constituent of his research framework As a second part of the research framework an analysis and modeling method is proposed that captures the various knowledge conversion activities described by the integrated descriptive model of knowledge creation Subsequently this research framework is applied to the analysis of knowledge characteristics of mechatronic product development MPD Finally the results gained from the previous steps are used within a design support system that aims at federating the information and knowledge resources contained in the models published in the various development activities of MPD
