The Molecular Basis of B-Cell Differentiation and Function M. Ferrarini, Benvenuto Pernis, 2013-03-09 The progress in
protein and nucleic acid chemistry together with improvements of the previously employed tissue culture techniques have led
to the solution of problems such as that of the generation of antibody diversity or of the molecular structure of T and B cell
membrane receptor for antigen which had challenged the past generations of immunologists Thanks to this progress an
impressive amount of knowledge has been accumulated on certain cell types that were relatively mysterious until recently
The B lymphocyte represents a typical example of such a cell With these considerations in mind we have started to organize a
NATO summer school on The molecular basis of B cell differentiation and function that had the specific aim of bringing up to
date a selected number of young investigators During the course held in Santa Margherita Ligure October 1-11 1985 it
became apparent that rather than a formal school we had organized an informal series of Workshops where both the Faculty
members and the participants were discussing their own data in addition to reviewing the general progress in the field The
deep commitment of everyone to his research subject and the enthusiasm had caused this very successful change in the
shape of the course At the end we asked the members of the Faculty and the participants to write a summary of their data
and of their point of view on selected subjects **B Cell Protocols** Hua Gu, Klaus Rajewsky, 2008-02-04 B lymphocyte
development and function remains an exciting area of research for those interested in the physiology and pathology of the
immune system in higher animals While recent advances in genetics and cellular and molecular biology have provided a large
spectrum of powerful new experimental tools in this field it is both time consuming and often very difficult for a student or
just any bench side worker to identify a reliable experimental protocol in the ocean of the literature The aim of B Cell
Protocols is to provide a collection of diverse protocols ranging from the latest inventions and applications to some classic

but still frequently used methods in B cell biology The authors of the various chapters are all highly qualified scientists who are either the inventors or expert users of these methods Their extensive experience in mastering a particular method provides not only the step by step details of a reproducible protocol but also useful troubleshooting tips that readers will appreciate in their daily work We hope that this book will be helpful for both beginning and experienced researchers in the field in designing or modifying an experimental approach and exploring a biological question from multiple angles

B Cell Activation in Biology and in Disease Wanli Liu, Yingyue Zeng, 2025-02-25 This book intends to introduce the basic concepts of B cell activation and its latest advances in biological research and disease treatment applications including the structure and classification of B cell receptors the process and mechanism of antibody mediated B cell activation and tumour immunity and monoclonal antibody therapies The book is likely to be of interest to university researchers and graduate students in immunology who wish to learn about the core principles methods and application of B cell activation and medical practitioners working on tumour immunotherapy
