Material Science And Engineering A First Course V Raghavan:

Materials Science and Engineering: A First Course, 1997 **MATERIALS SCIENCE AND ENGINEERING : PROBLEMS WITH SOLUTIONS** SHETTY, M.N.,2015-12-01 This book with analytical solutions to 260 select problems is primarily designed for the second year core course on materials science The treatment of the book reflects the author s experience of teaching this course comprehensively at IIT Kanpur for a number of years to the students of engineering and 5 year integrated disciplines The problems have been categorised into five sections covering a wide range of solid state properties Section 1 deals with the dual representation of a wave and a particle and then comprehensively explains the behaviour of particles within potential barriers It provides solutions to the problems that how the energy levels of a free atom lead to the formation of energy bands in solids The statistics of the distribution of particles in different energy states in a solid has been detailed leading to the derivation of Maxwell Boltzmann Bose Einstein and Fermi Dirac statistics and their mutual relationships Quantitative derivation of the Fermi energy has been obtained by considering free electron energy distribution in solids and then considering Fermi Dirac distribution as a function of temperature The derivation of the Richardson s equation and the related work function has been quantitatively dealt with The phenomenon of tunnelling has been dealt with in terms of quantum mechanics whereas the band structure and electronic properties of materials are given quantitative treatment by using Fermi Dirac distribution function Section 2 deals with the nature of the chemical bonds types of bonds and their effect on properties followed by a detailed presentation of crystal structures of some common materials and a discussion on the structures of C60 and carbon nanotubes Coordination and packing in crystal structures are considered next followed by a detailed X ray analysis of simple crystal structures imperfections in crystals diffusion phase equilibria and mechanical behaviour Section 3 deals with thermal and electrical properties and their mutual relationships Calculations of Debye frequency Debye temperature and Debye specific heat are presented in great detail A brief section on superconductivity considers both the conventional and the high TC superconductors Sections 4 and 5 deal with the magnetic and dielectric materials considering magnetic properties from the point of view of the band theory of solids Crystal structures of some common ferrites are given in detail Similarly the displacement characteristics in dielectrics are considered from their charge displacements giving rise to some degree of polarization in the materials *RATE PROCESSES IN METALLURGY, REVISED EDITION* MOHANTY, A. K.,2009-06-08 Primarily intended for the undergraduate students of metallurgical engineering this book provides a firm foundation for the study of the fundamental principles of transport processes and kinetics of the chemical reactions that greatly help in carrying out a complete analysis of the rate processes in metallurgy Systematically organized in eight chapters the book provides a comprehensive treatment and balanced coverage of topics such as kinetic properties of fluids heat transfer mass transfer techniques of dimensional analysis treatment of transport problems by means of the boundary layer theory reaction kinetics and also makes a study of

simultaneous transfer of heat mass and momentum for various metallurgical phenomena Every major concept introduced is worked out through suitable solved examples to a numerical conclusion In addition each chapter concludes with a wide variety of review questions and problems to aid further understanding of the subject *Materials Science Compendium* Dr. A. K. Shrivastva, The study of science of materials has become in recent years an integral part of virtually all university courses in engineering The subject of material science is an essential component of engineering education It was with this in mind that present book was written This book is primarily aimed at explaining the basic concepts of the science of materials This is an elementary textbook on material science for graduate students of science and engineering This book is suitable for students and engineers working in the material science field A design engineer must have a sound knowledge of the basic concepts of material science The presentation is concise clear and lucid The book covers the syllabus of undergraduate engineering courses of Indian Universities A number of solved numerical problems have been included in the book to help the students in their learning and understanding process **METAL CASTING AND JOINING** JOHN, K. C.,2015-01-02 Designed for the undergraduate students of mechanical engineering and allied branches this book serves as a bridge between the study of the basic processes and their application in production industries This book covers two similar fundamental processes foundry and welding in a single volume The chapters of the book are grouped in seven modules A separate module is devoted to introduce the preliminaries of the two areas namely casting and joining processes Miscellaneous welding and allied processes including the modern methods and thermal cutting conventional sand mould casting special and modern casting methods conventional metal joining processes and theory of solidification of metal its metallurgy defects in castings and casting design procedure are covered in the book The theory of each process is explained with the help of simple line sketches which can be easily reproduced by a student at the time of examination Enough worked out examples and problems are given for practice especially in the design areas At the end of each chapter sufficient number of review questions are given as exercise *Charge-Trapping Non-Volatile Memories* Panagiotis Dimitrakis,2017-02-14 This book describes the technology of charge trapping non volatile memories and their uses The authors explain the device physics of each device architecture and provide a concrete description of the materials involved and the fundamental properties of the technology Modern material properties used as charge trapping layers for new applications are introduced Provides a comprehensive overview of the technology for charge trapping non volatile memories Details new architectures and current modeling concepts for non volatile memory devices Focuses on conduction through multi layer gate dielectrics stacks Solid State Physics Mohammad Abdul Wahab,2005 Solid State Physics a comprehensive study for the undergraduate and postgraduate students of pure and applied sciences and engineering disciplines is divided into eighteen chapters The First seven chapters deal with structure related aspects such as lattice and crystal structures bonding packing and diffusion of atoms followed by imperfections and lattice vibrations Chapter eight deals mainly with experimental methods

of determining structures of given materials While the next nine chapters cover various physical properties of crystalline solids the last chapter deals with the anisotropic properties of materials This chapter has been added for benefit of readers to understand the crystal properties anisotropic in terms of some simple mathematical formulations such as tensor and matrix New to the Second Edition Chapter on Anisotropic Properties of Materials Chemical Metallurgy Chiranjib Kumar Gupta,2006-03-06 Chemical metallurgy is a well founded and fascinating branch of the wide field of metallurgy This book provides detailed information on both the first steps of separation of desirable minerals and the subsequent mineral processing operations The complex chemical processes of extracting various elements through hydrometallurgical pyrometallurgical or electrometallurgical operations are explained In the choice of material for this work the author made good use of the synergy of scientific principles and industrial practices offering the much needed and hitherto unavailable combination of detailed treatises on both compiled in one book *Journal of the Institution of Engineers (India)* ,1978 **Indian Book Industry** ,1989 **BEPI** ,1980 *A First Course in Materials Science* V. Raghavan,1974 Indian Books in Print ,2002 *Materials Science and Engineering* Raghawan V,1996 *International Books in Print* ,1991 **Metals Abstracts** ,1985-07 **Mechanical Engineering News** ,1972 Technical Book Review Index ,1975 **Proceedings of the Indian National Science Academy** Indian National Science Academy,1981 **Books from India** ,1975
