

**Enhancing shareholder wealth:** while the overall aim of all listed firms is to maximise shareholder wealth, specific financial aims in a firm's annual report would not normally make reference to this

- Decrease cash for bonuses
- Increase brand reputation and recognition
- Invest in projects with positive NPV
- Decrease average cost of capital
  - If entity is all-equity financed, raising debt finance will decrease its cost of capital
- Moving profitable operations to low tax regimes

**NOT-FOR-PROFIT (NFP) ENTITIES:** primary objective is provision of an acceptable level of service to key stakeholders; since services provided are limited by available funds, secondary objective is to raise maximum funds and to use such funds efficiently to maximise benefited generated

- **Public sector entities:** ie hospitals; nationalised industry; government; generally run to the benefit of society overall and often regulated; but major problem is obtaining a measurable objective:
  - Budgetary compliance: usually set by government
  - Risk exposure: risk averse due to political repercussions of failure
  - Profitability: largely absent as a concept in its truest form, but may be used to relate inputs to outputs
  - Cash generation
  - Value added
  - Return on Assets (ROA): interpretation impacted in the public sector as concept of profit is largely absent
  - Market share: increasingly relevant
  - Competitive position: increasingly relevant

**Value for money (VFM) / 3Es:** useful means of appraising NFP performance under the umbrella term "cost-effectiveness": the optimal use of resources to achieve the intended outcome

- 1. Economy (input measure):** minimise the cost of resources (inputs) used; spend less
  - 2. Efficiency (links input to output):** relationship between products (outputs) and resources (inputs) used to produce them; spend well
  - 3. Effectiveness (output measure):** relationship between inputs and actual results of public spending (outcomes); spend wisely
- ...a fourth E is suggested: **4. Equity:** extent to which services reach all people intended; spend fairly
- **VFM audit:** investigating whether arrangements have been made for securing 3Es in use of resources; focuses on specific area of expenditure to conclude if VFM has been achieved
  - **Purpose:** independent analysis on the way money has been spent to achieve policy objectives

For-profit entity	Not-for-profit entity
Aim to maximise shareholder wealth	Aim to provide an acceptable level of service to key stakeholders and are concerned with VFM
Aim to satisfy a wide range of stakeholders	Aim to satisfy a wide range of stakeholders
Have financial and profit objectives	Do not have profit orientated objectives, but may have financial objectives

**INTERNATIONAL OPERATIONS:** entities are increasingly expanding across national boundaries in the modern business environment, resulting in some additional considerations:

Strategic considerations of international expansion	Financial considerations of international expansion
<b>Risk management:</b> interest rates, foreign exchange rates, government policy	<b>Maximisation of shareholder wealth:</b> by undertaking positive NPV projects internationally
<b>Competition:</b> foreign markets may have weaker/stronger competition	
<b>Customers:</b> may enhance/women customer relationships by moving closer/further away; while also exposing the firm to pool of potential new customers	<b>Impact on financial statements:</b> assets/transactions denominated in a foreign currency must be converted to the domestic (functional) currency, thus exposing the entity to translation risk as exchange rates fluctuate
<b>Economies of scale</b>	
<b>Costs:</b> higher distribution costs; possibly lower raw materials and labour costs	
<b>Ethical issues:</b> taking advantage of less developed labour laws	<b>Impact on cost of capital:</b> likely to change to reflect increased associated risk.
<b>Cultural issues:</b> differences in language, customs, and advertising	

**FINANCIAL PERFORMANCE APPRAISAL:** investors (shareholders and lenders) appraise entity performance to assess whether it represents a good investment, necessitating ratio analysis:

- **Gross profit** = Revenue / sales - Cost of goods sold (COGS)
- **Operating profit / Profit before interest and tax (PBIT)** = Gross profit - Operating expenses
- **Profit before tax** = Operating profit - Finance costs (interest payable)
- **Earnings / Net income / Profit after tax (PAT)** = Profit before tax - Tax

**PROFITABILITY RATIOS:** ideal value varies; important to compare over time and between entities

- **Gross profit margin:** % of revenue retained after cost of goods sold (COGS) are deducted

$$\text{Gross profit} = \text{Revenue} - \text{Cost of goods sold (COGS)}$$

$$\text{Gross profit margin} = \frac{\text{Gross profit}}{\text{Revenue}} \times 100\%$$

- **Operating profit margin:** profit after operating expenses (indirect costs such as administration and distribution costs) but before interest (finance costs) and tax are deducted

$$\text{Operating profit} = \text{Gross profit} - \text{Operating expenses} = \text{Profit before interest and tax (PBIT)}$$

$$\text{Operating profit margin} = \frac{\text{Operating profit}}{\text{Revenue}} \times 100\%$$

**Operator Theory in Function Spaces** Kehe Zhu, 2007 This book covers Toeplitz operators Hankel operators and composition operators on both the Bergman space and the Hardy space The setting is the unit disk and the main emphasis is on size estimates of these operators boundedness compactness and membership in the Schatten classes Most results concern the relationship between operator theoretic properties of these operators and function theoretic properties of the inducing symbols Thus a good portion of the book is devoted to the study of analytic function spaces such as the Bloch space Besov spaces and BMOA whose elements are to be used as symbols to induce the operators we study The book is intended for both research mathematicians and graduate students in complex analysis and operator theory The prerequisites are minimal a graduate course in each of real analysis complex analysis and functional analysis should sufficiently prepare the reader for the book Exercises and bibliographical notes are provided at the end of each chapter These notes will point the reader to additional results and problems Kehe Zhu is a professor of mathematics at the State University of New York at Albany His previous books include Theory of Bergman Spaces Springer 2000 with H Hedenmalm and B Korenblum and Spaces of Holomorphic Functions in the Unit Ball Springer 2005 His current research interests are holomorphic function spaces and operators acting on them

Composition Operators on Spaces of Analytic Functions Jr. Cowen, Barbara I. MacCluer, 2019-03-04 The study of composition operators lies at the interface of analytic function theory and operator theory Composition Operators on Spaces of Analytic Functions synthesizes the achievements of the past 25 years and brings into focus the broad outlines of the developing theory It provides a

comprehensive introduction to the linear operators of composition with a fixed function acting on a space of analytic functions This new book both highlights the unifying ideas behind the major theorems and contrasts the differences between results for related spaces Nine chapters introduce the main analytic techniques needed Carleson measure and other integral estimates linear fractional models and kernel function techniques and demonstrate their application to problems of boundedness compactness spectra normality and so on of composition operators Intended as a graduate level textbook the prerequisites are minimal Numerous exercises illustrate and extend the theory For students and non students alike the exercises are an integral part of the book By including the theory for both one and several variables historical notes and a comprehensive bibliography the book leaves the reader well grounded for future research on composition operators and related areas in operator or function theory

*Fractional Cauchy Transforms* Rita A. Hibschiweiler, Thomas H. MacGregor, 2020-01-15 Presenting new results along with research spanning five decades Fractional Cauchy Transforms provides a full treatment of the topic from its roots in classical complex analysis to its current state Self contained it includes introductory material and classical results such as those associated with complex valued measures on the unit circle that form the basis of the developments that follow The authors focus on concrete analytic questions with functional analysis providing the general framework After examining basic properties the authors study integral means and relationships between the fractional Cauchy transforms and the Hardy and Dirichlet spaces They then study radial and nontangential limits followed by chapters devoted to multipliers composition operators and univalent functions The final chapter gives an analytic characterization of the family of Cauchy transforms when considered as functions defined in the complement of the unit circle

*Nonlinear Maps and their Applications* Ricardo López-Ruiz, Danièle Fournier-Prunaret, Yoshifumi Nishio, Clara Grácio, 2015-03-11 In the field of Dynamical Systems nonlinear iterative processes play an important role Nonlinear mappings can be found as immediate models for many systems from different scientific areas such as engineering economics biology or can also be obtained via numerical methods permitting to solve non linear differential equations In both cases the understanding of specific dynamical behaviors and phenomena is of the greatest interest for scientists This volume contains papers that were presented at the International Workshop on Nonlinear Maps and their Applications NOMA 2013 held in Zaragoza Spain on September 3 4 2013 This kind of collaborative effort is of paramount importance in promoting communication among the various groups that work in dynamical systems and networks in their research theoretical studies as well as for applications This volume is suitable for graduate students as well as researchers in the field

Operator Theory, Operator Algebras and Applications William Arveson, 1990 Operator theory has come of age during the last twenty years The subject has developed in several directions using new and powerful methods that have led to the solution of basic problems previously thought to be inaccessible In addition operator theory has had fundamental connections with a range of other mathematical topics For example operator theory has made mutually enriching contacts with other areas of mathematics such as algebraic topology and index theory complex analysis and probability theory The algebraic methods employed in operator theory are diverse and touch upon a broad area of mathematics There have been direct applications of operator theory to systems theory and statistical mechanics And significant problems and motivations have arisen from the subject s traditional underpinnings for partial differential equations This two volume set contains the proceedings of an AMS Summer Institute on Operator Theory Operator Algebras held in July 1988 at the University of New Hampshire The Institute sought to summarize progress and examine the common points of view that now run through the subject With contributions from some of the top experts in the field this publication illuminates a broad range of current research topics in operator theory
