Experiments With Alternate Currents of High Potential and High Frequency Nikola Tesla,2016-04-28

It was in this interesting border region and from among these valiant Eastern folk that Nikola Tesla was born in the year 1857 and the fact that he today finds himself in America and one of our foremost electricians is striking evidence of the extraordinary attractiveness alike of electrical pursuits and of the country where electricity enjoys its widest application Mr Tesla s native place was Smiljan Lika where his father was an eloquent clergyman of the Greek Church in which by the way his family is still prominently represented His mother enjoyed great fame throughout the countryside for her skill and originality in needlework and doubtless transmitted her ingenuity to Nikola though it naturally took another and more masculine direction The boy was early put to his books and upon his father s removal to Gospic he spent four years in the public school and later three years in the Real School as it is called His escapades were such as most quick witted boys go through although he varied the programme on one occasion by getting imprisoned in a remote mountain chapel rarely visited for service and on another occasion by falling headlong into a huge kettle of boiling milk just drawn from the paternal herds A third curious episode was that connected with his efforts to fly when attempting to navigate the air with the aid of an old umbrella he had as might be expected a very bad fall and was laid up for six weeks

race would have long ago perished in the bitter struggle against pitiless elements Speaking for myself I have already had more than my full measure of this exquisite enjoyment so much that for many years my life was little short of continuous rapture I am credited with being one of the hardest workers and perhaps I am if thought is the equivalent of labor for I have devoted to it almost all of my waking hours But if work is interpreted to be a definite performance in a specified time according to a rigid rule then I may be the worst of idlers Every effort under compulsion demands a sacrifice of life energy I never paid such a price On the contrary I have thrived on my thoughts In attempting to give a connected and faithful account of my activities in this series of articles which will be presented with the assistance of the Editors of the Electrical Experimenter and are chiefly addressed to our young men readers I must dwell however reluctantly on the impressions of my youth and the circumstances and events which have been instrumental in determining my career Our first endeavors are purely instinctive promptings of an imagination vivid and undisciplined As we grow older reason asserts itself and we become more and more systematic and designing But those early impulses although not immediately productive are of the greatest moment and may shape our very destinies Indeed I feel now that had I understood and cultivated instead of suppressing them I would have added substantial value to my bequest to the world But not until I had attained manhood did I realize that I was an inventor
