How to Make Money Installing GPS Trackers for Cars A. B. Lawal, 2019-09-13 About the Book The market for GPS tracking services is a rapidly growing and relatively untapped opportunity for small businesses and entrepreneurs. Currently, there are more than 12 million registered commercial vehicles in the USA alone. In Latin America, there are over 20 million. However, a very small percentage of these vehicles are protected by fleet management software. Fortunately, this has started to change. There are many facets in a GPS car tracking business that are profitable for entrepreneurs, and that's why you should read this guide, including the benefit of recurring revenue from service subscriptions. Before you start your GPS vehicle tracking business, you should consider several steps that will help your company to succeed. Use this guide to walk yourself through some important steps that you must take to launch a successful GPS vehicle tracking business. Finally, in the last chapter of my guide, I introduce a world-class GPS tracking platform provider vendor that will help you get started and put your new GPS tracking business on the map. They will ensure you're in business for yourself but never by yourself. A link to a demo of their GPS tracking software is provided for you so you can learn how their team of GPS experts can start you up in business.

GPS Tracking with Java EE Components Kristof Beiglböck, 2018-08-06 GPS Tracking with Java EE Components Challenges of Connected Cars highlights how the self-driving car is actually changing the automotive industry from programming embedded software to hosting services and data crunching in real time with really big data. The book analyzes how the challenges of the Self-Driving Car (SDC) exceed the limits of a classical GPS Tracking System (GTS). It provides a guidebook on setting up a tracking system by customizing its components. It also provides an overview of the prototyping and modeling process and how the reader can modify this process for his or her own software. Every component is introduced in detail and includes a number of design decisions for development. The book introduces Java EE JEE Modules and shows how they can be combined to a customizable GTS and used as seed components to enrich existing systems with live tracking. The book also explores how to merge tracking and mapping to guide SDCs and focuses on client-server programming to provide useful information. It also discusses the challenges involved with the live coordination of moving cars. This book is designed to aid GTS developers and engineers in the automotive industry. It can also help Java Developers not only interested in GPS Tracking but in modern software design from many individual modules. Source code and sample applications will be available on the book's website.

This model should provide reliability since it deals with several protocols: 1. HTTP and HTTPS to navigate, download, and upload in real time the information to a web server; 2. FTP and FTTPS to handle in a non-real-time the files to the web application; and 3. SMTP and POP3 to send and receive email directly from the unit in case of any alert. Similar to a mobile device but without screen for display, it is multifunctional because it
