Physiology and Pathophysiology of the Heart Nick Sperelakis, 1989-01-31 The first edition of this book was quite successful. As in the first edition, the book is divided into two major sections: cardiac muscle and coronary circulation. Several complimentary book reviews appeared soon after the first edition was published and written. The book is multidisciplinary and includes membrane biophysics, electrophysiology, physiology, oral words of praise and appreciation were given both to the publisher and to me by quite a few individuals and ultrastructure. Thus, the book attempts to integrate all relevant aspects of the factors influencing the function of the heart as a vital organ under normal and various abnormal conditions. The book, taking over a year to complete, all chapter contributors also attempted to set the foundation for an understanding of the action and mechanism of action of their articles and all have done so with enthusiasm. number of classes of cardioactive drugs

Communication Within Animal Cells Greg J. Barritt, 1992 The ordered growth and functioning of animal cells requires the transfer of information from one part of the cell to another. This textbook brings together and puts into perspective current knowledge about intracellular signalling systems from the initial signal, e.g. binding of a neurotransmitter to a receptor, to the final response. It discusses the finely balanced interactions between the different signalling pathways which ensure that the correct response occurs and the consequences of abnormalities in the systems. Written in a clear and authoritative style with many illustrations, it will be invaluable to students on advanced undergraduate and graduate courses. It also provides a detailed introduction to and review of this central topic for researchers in cell biology and related disciplines.
