*Super-Resolved Imaging* Zeev Zalevsky,2011-09-08 In this brief we review several approaches that provide super resolved imaging overcoming the geometrical limitation of the detector as well as the diffraction effects set by the F number of the imaging lens In order to obtain the super resolved enhancement we use spatially non uniform and or random transmission structures to encode the image or the aperture planes The desired resolution enhanced images are obtained by post processing decoding of the captured data Building Electro-Optical Systems Philip C. D. Hobbs,2000 While most books on electro optical systems concentrate on an individual subfield this one presents an overview of the whole field providing researchers with working knowledge of a number of cross disciplinary areas It includes essential information on how to build modern electro optical instruments such as microscopes cameras optical inspection equipment and spectrometers and optical related computer equipment *Laser Radar Technology and Applications XV* Monte D.
