Quantum Fields and Strings: A Course for Mathematicians Pierre Deligne, Pavel Etingof, Daniel S. Freed, Lisa C. Jeffrey, David Kazhdan, John W. Morgan, David R. Morrison, Edward Witten, 2000-04-27 A runaway bestseller from the moment it hit the market in late 1999 This impressive thick softcover offers mathematicians and mathematical physicists the opportunity to learn about the beautiful and difficult subjects of quantum field theory and string theory Cover features an intriguing cartoon that will bring a smile to its intended audience

Quantum Fields and Strings Pierre Deligne, 1999 Ideas from quantum field theory and string theory have had considerable impact on mathematics since the 1980s Advances in many different areas have been inspired by insights from physics In 1996-97 the Institute for Advanced Study Princeton NJ organized a special year long programme designed to teach mathematicians the basic physical ideas which underlie the mathematical applications

Lectures on Field Theory and Topology Daniel S. Freed, 2019-08-23 These lectures recount an application of stable homotopy theory to a concrete problem in low energy physics the classification of special phases of matter While the joint work of the author and Michael Hopkins is a focal point a general geometric frame of reference on quantum field theory is emphasized Early lectures describe the geometric axiom systems introduced by Graeme Segal and Michael Atiyah in the late 1980s as well as subsequent extensions This material provides an entry point for mathematicians to delve into quantum field theory Classification theorems in low dimensions are proved to illustrate the framework The later lectures turn to more specialized topics in field theory including the relationship between invertible field theories and stable homotopy theory extended unitarity anomalies and relativistic free fermion systems The accompanying mathematical explanations touch upon higher category theory duals to the sphere spectrum equivariant spectra differential cohomology and Dirac operators The outcome of computations made using the Adams spectral sequence is presented and compared to results in the condensed matter literature obtained by very different means The general perspectives and specific applications fuse into a compelling story at the interface of contemporary mathematics and theoretical physics

Geometry and Physics Jürgen Jost, 2009-08-17 *Geometry and Physics* addresses mathematicians

wanting to understand modern physics and physicists wanting to learn geometry It gives an introduction to modern quantum field theory and related areas of theoretical high energy physics from the perspective of Riemannian geometry and an introduction to modern geometry as needed and utilized in modern physics Jürgen Jost a well known research mathematician and advanced textbook author also develops important geometric concepts and methods that can be used for the structures of physics In particular he discusses the Lagrangians of the standard model and its supersymmetric extensions from a geometric perspective [A Mathematical Introduction to Conformal Field Theory](#) Martin Schottenloher,2008-09-26 The first part of this book gives a self contained and mathematically rigorous exposition of classical conformal symmetry in n dimensions and its quantization in two dimensions The second part surveys some more advanced topics of conformal field theory *String-Math 2013* Ron Donagi, Michael R. Douglas,Ljudmila Kamenova,Martin Rocek,2014-12-02 This volume contains the proceedings of the conference String Math 2013 which was held June 17 21 2013 at the Simons Center for Geometry and Physics at Stony Brook University This was the third in a series of annual meetings devoted to the interface of mathematics and string theory Topics include the latest developments in supersymmetric and topological field theory localization techniques the mathematics of quantum field theory superstring compactification and duality scattering amplitudes and their relation to Hodge theory mirror symmetry and two dimensional conformal field theory and many more This book will be important reading for researchers and students in the area and for all mathematicians and string theorists who want to update themselves on developments in the math string interface *Strings and Geometry* Clay Mathematics Institute. Summer School,Isaac Newton Institute for Mathematical Sciences,2004 Contains selection of expository and research article by lecturers at the school Highlights current interests of researchers working at the interface between string theory and algebraic supergravity supersymmetry D branes the McKay correspondence andFourer Mukai transform

Some Mathematical Aspects of Quantum Field Theory Qingtao Chen,2009 **Bulletin of the American Mathematical Society** American Mathematical Society,Otto F. G. Schilling,2014-04 *Bulletin (new Series) of the American Mathematical Society* ,2008 **Catalogue** American Mathematical Society,2000 **Recent Developments in General Relativity,Genoa 2000** R. Cianci,R. Collina,M. Francaviglia,P. Fre,2002-07 A survey of the most recent developments in general relativity and in the theory of the unification of Fundamental Interactions is presented in this book The theoretical results the cosmological and astrophysical aspects the experimental and observational programs are shown in 26 general talks by renowned scientists active in this field [Subject Guide to Books in Print](#) ,1993 *Sasakian Geometry* Charles Boyer,Krzysztof Galicki,2008-01-24 This book offers an extensive modern treatment of Sasakian geometry which is of importance in many different fields in geometry and physics [Mathematical Reviews](#) ,2003 [Frobenius Algebras and 2-D Topological Quantum Field Theories](#) Joachim Kock,2004 This 2003 book describes a striking connection between topology and algebra namely that 2D topological quantum field theories are equivalent to commutative Frobenius algebras

The precise formulation of the theorem and its proof is given in terms of monoidal categories and the main purpose of the book is to develop these concepts from an elementary level and more generally serve as an introduction to categorical viewpoints in mathematics. Rather than just proving the theorem, it is shown how the result fits into a more general pattern concerning universal monoidal categories for algebraic structures. Throughout the emphasis is on the interplay between algebra and topology with graphical interpretation of algebraic operations and topological structures described algebraically in terms of generators and relations. The book will prove valuable to students or researchers entering this field who will learn a host of modern techniques that will prove useful for future work.
