Blueprint Numbers Counting :

Blueprints Marcus du Sautoy,2025-09-09 A stunning book a thrilling read Peter Frankopan that reveals how creative people can harness the profound and productive relationship between mathematics and the arts When Shakespeare has the Three Witches cast Macbeth s lot he uses something very weird to do it not simply eye of newt and toe of frog but the number seven And when Hamlet claims To be or not to be that is the question Shakespeare reaches for eleven For Shakespeare prime numbers were magical And he is not alone As Marcus du Sautoy showcases in *Blueprints* creativity is inseparable from mathematics The designs of Le Corbusier and Leonardo the music of Glass Bach and Debussy the wild visions of Dali the choreography of Laban the animation of Pixar all are shot through with mathematics from primes and fractals to the weirder worlds of Hamiltonian cycles and hyperbolic geometry And Du Sautoy argues that the relationship runs both ways Just as mathematics inspires new art the artistic mindset is a necessity for discovering new mathematics *Blueprints* will expand your mind but more importantly it shows how to ignite your imagination Anyone who wants to create needs this book

Blueprints for Text Analytics Using Python Jens Albrecht,Sidharth Ramachandran,Christian Winkler,2020-12-04 Turning text into valuable information is essential for businesses looking to gain a competitive advantage With recent improvements in natural language processing NLP users now have many options for solving complex challenges But it s not always clear which NLP tools or libraries would work for a business s needs or which techniques you should use and in what order This practical book provides data scientists and developers with blueprints for best practice solutions to common tasks in text analytics and natural language processing Authors Jens Albrecht Sidharth Ramachandran and Christian Winkler provide real world case studies and detailed code examples in Python to help you get started quickly Extract data from APIs and web pages Prepare textual data for statistical analysis and machine learning Use machine learning for classification topic modeling and summarization Explain AI models and classification results Explore and visualize semantic similarities with word embeddings Identify customer sentiment in product reviews Create a knowledge graph based on named entities and their relations

Robertson, Jaume Agustí, 1999 Conceptual models are descriptions of our ideas about a problem used to shape the implementation of a solution to it Everyone who builds complex information systems uses such models be they requirements analysts knowledge modellers or software designers but understanding of the pragmatics of model design tends to be informal and parochial Lightweight uses of logic can add precision without destroying the intuitions we use to interpret our descriptions Computing with logic allows us to make use of this precision in providing automated support tools Modern information scientists need to know what these methods are for and may need to build their own This book gives you a place to begin Where do you start when building models in a precise language like logic One way is by following standard paradigms for design and adapting these to your needs Some of these come from an analysis of existing informal notations Others are from within logic itself We take you through a sample of these from more commonplace styles of formal modelling to non standard methods such as techniques editing and argumentation Each of these provides a window onto broader areas of applied logic and gives you a basis for adapting the method to your own needs *Aircraft Sheet Metal Blueprint Reading* Harry Herschell Coxen, Gerald E.
