**Geo Info Systems**, 1996 **How the States Got Their Shapes** Mark Stein, 2008-05-27 Why does Oklahoma have that panhandle Did someone make a mistake We are so familiar with the map of the United States that our state borders seem as much a part of nature as mountains and rivers Even the oddities the entire state of Maryland have become so engrained that our map might as well be a giant jigsaw puzzle designed by Divine Providence But that's where the real mystery begins Every edge of the familiar wooden jigsaw pieces of our childhood represents a revealing moment of history and of well humans drawing lines in the sand How the States Got Their Shapes is the first book to tackle why our state lines are where they are Here are the stories behind the stories right down to the tiny northward jog at the eastern end of Tennessee and the teeny tiny and little known parts of Delaware that are not attached to Delaware but to New Jersey How the States Got Their Shapes examines Why West Virginia has a finger creeping up the side of Pennsylvania Why Michigan has an upper peninsula that isn't attached to Michigan Why some Hawaiian islands are not Hawaii Why Texas and California are so outsized especially when so many Midwestern states are nearly identical in size Packed with fun oddities and trivia this entertaining guide also reveals the major fault lines of American history from ideological intrigues and religious intolerance to major territorial acquisitions Adding the fresh lens of local geographic disputes military skirmishes and land grabs Mark Stein shows how the seemingly haphazard puzzle pieces of our nation fit together perfectly

**The New Nature of Maps** John Brian Harley, 2001 Focusing on historical examples and the practices of modern cartography J B Harley 1932-1991 offers an alternative to the dominant view that Western cartography since the Renaissance has been a progressive technological scientific and objective trajectory of development This traditional view asserts that maps produce an accurate relational model of terrain and as such epitomize representational modernism which is rooted in the project of the Enlightenment in sum maps banish subjectivity from the image Accordingly cartographers have promoted a standard scientific model for their discipline one in which a mirror of nature can be projected through geometry and measurement Cartographers often mistakenly assess early maps by this modern yardstick excising from the accepted canon of mapping not only maps from the premodern era but also those from other cultures that do not match Western notions of accuracy
