PAGE: 270

1. A survey was conducted by a group of students as a part of their environment awareness program, in which they collected the following data regarding the number of plants in 20 houses in a locality. Find the mean number of plants per house.

|                  |     |     |     |     |      |       |       |
|------------------|-----|-----|-----|-----|------|-------|-------|
| Number of Plants | 0-2 | 2-4 | 4-6 | 6-8 | 8-10 | 10-12 | 12-14 |
| Number of Houses | 1   | 2   | 1   | 5   | 6    | 2     | 3     |

Which method did you use for finding the mean, and why?

**Solution:**

To find the mean value, we will use the direct method because the numerical value of  $f$  and  $x$ , are small.

Find the midpoint of the given interval using the formula.

Midpoint ( $x_i$ ) = (upper limit + lower limit)/2

| No. of plants<br>(Class interval) | No. of houses<br>Frequency ( $f$ ) | Mid-point ( $x_i$ ) | $fx_i$           |
|-----------------------------------|------------------------------------|---------------------|------------------|
| 0-2                               | 1                                  | 1                   | 1                |
| 2-4                               | 2                                  | 3                   | 6                |
| 4-6                               | 1                                  | 5                   | 5                |
| 6-8                               | 5                                  | 7                   | 35               |
| 8-10                              | 6                                  | 9                   | 54               |
| 10-12                             | 2                                  | 11                  | 22               |
| 12-14                             | 3                                  | 13                  | 39               |
|                                   | Sum $f = 20$                       |                     | Sum $fx_i = 162$ |

The formula to find the mean is:

$$\text{Mean} = \bar{x} = \frac{\sum fx_i}{\sum f}$$

$$= 162/20$$

$$= 8.1$$

Therefore, the mean number of plants per house is 8.1.
