**C++ Programming** Firdoos Quraishi, 2014-12-04 C pronounced cee plus plus is a general purpose programming language It has imperative object oriented and generic programming features while also providing the facilities for low level memory manipulation It is designed with a bias for systems programming e.g embedded systems operating system kernels with performance efficiency and flexibility of use as its design requirements C has also been found useful in many other contexts including desktop

applications servers e.g. e-commerce web search SQL performance critical applications e.g. telephone switches space probes and entertainment software such as video games It is a compiled language with implementations of it available on many platforms Various organizations provide them including the FSF LLVM Microsoft and Intel C is standardised by the International Organization for Standardization ISO which the latest and current having being ratified and published by ISO in September 2011 as ISO IEC 14882 2011 informally known as C 11 The C programming language was initially standardised in 1998 as ISO IEC 14882 1998 which was then amended by the C 03 ISO IEC 14882 2003 standard The current standard C 11 supersedes these with new features and an enlarged standard library Before standardization 1989 onwards C was developed by Bjarne Stroustrup at Bell Labs starting in 1979 who wanted an efficient flexible language like C that also provided high level features for program organization Many other programming languages have been influenced by C including C Java and newer versions of C after 1998
