

# Analytical Skills interview questions and answers to evaluate junior analysts

How do you approach a new dataset you've never worked with before?

When approaching a new dataset, I first familiarize myself with the data by understanding its structure, the types of variables, and any apparent patterns or anomalies. I typically begin with an exploratory data analysis (EDA) to get a sense of the data's distribution and relationships among variables.

Following this, I clean the dataset by handling missing values, removing duplicates, and correcting inconsistencies. This ensures that the data is accurate and reliable for further analysis. My goal is to transform raw data into a format that is suitable for analysis and interpretation.

Look for candidates who detail a structured and systematic approach to handling new data. They should mention specific steps such as EDA, data cleaning, and initial assessments to ensure data quality.
