

Best Practices and HPC Strategies for Ansys Mechanical

Challenges

Business requires low-cost, quickly completed structural simulation. Modeling complex geometries, capturing nonlinear material behavior, and ensuring accurate boundary conditions often are tedious, costly, and error-prone tasks. These challenges can be mitigated with the following strategies and efficient modeling tools – all of which are covered in this presentation.

In addition, engineers increasingly need to simulate a wide range of complex structural forms, and fast business cycles, adding other constraints to models. This talk will discuss design automation and using design automation tools to help streamline and optimize processes.

The other leading challenge is performance, especially HPC resources needed. Maximizing the efficiency of your job and quickly reconfiguring jobs without reparameterizing HPC usage requires a strategic approach. This talk details the various tools and strategies available to create jobs that are efficient, accurate, and easy to manage and execute.

Finally, using HPC resources flexibly may be possible and even in-house, depending on your existing hardware. This talk will discuss the various options available to you.
