Introducción

Esta nota de aplicación describe un protocolo de transmisión de algoritmo de código variable seguro para su uso en un sistema de comunicación inalámbrico unidireccional. Las aplicaciones típicas de este algoritmo son los abre-puertas de garaje, la entrada remota sin llave, la entrada pasiva y los sistemas de amanque remoto de automóviles.

El protocolo de transmisión se puede utilizar en un sistema que consta de un receptor y un número limitado de transmisores asociados. Dos cualidades críticas de este protocolo son: (1) No se requiere ninguna transmisión, lo que evita que un posible ladrón tome el mensaje y lo retransmita y (2) Es prácticamente imposible predecir el contenido del mensaje, incluso si se conocen los mensajes anteriores. El receptor ignora todos los mensajes que ya se han utilizado.

En esta nota de aplicación se incluye una implementación funcional escrita en C. La documentación completa del código fuente y la información de compilación se encuentran abriendo el archivo readme.html incluido con el código fuente.
