Directions: Follow the instructions to go through the simulation. Respond to the questions and prompts in the orange boxes.

Vocabulary: escape velocity, gravity, orbit, orbital velocity, trajectory, velocity

Prior Knowledge Questions (Do these BEFORE using the Gizmo.)

On their summer vacation, a family is standing at a scenic overlook at the top of a tall cliff. Young Alice (age 2) tosses a rock over the edge and giggles as she watches it fall. Brother Darrell (age 8) thinks he can do better and hurls another rock over the edge. Papa Billy chuckles, picks up a nice round rock, and flings it off the cliff as hard as he can.

- In the picture to the right, draw the **trajectory**, or path, that each rock would take. Label the three trajectories "Alice", "Darrell" and "Billy" (or just A, D and B). **billy was the farthest and then darrell and then alice**
- What would happen if Billy could throw the rock as fast as a rocket?

I might go through the ground and cause an explosion. It would reach the ground faster.

Gizmo Warm-up: Which way does gravity pull?

- Use the slider to set the **Velocity** to 0.0 km/s (kilometers per second). **Velocity** is basically the same thing as speed, but has direction as well. In this case the pitcher is simply dropping the ball. Click **Play** (▶).

A. What direction does the ball go?

The ball goes straight down.

B. Sketch the pitcher and the trajectory of the ball on the diagram.

- Click **Reset** (↺) and drag the pitcher to several new positions. Click **Play** and watch him drop the ball each time. Sketch the pitcher and the trajectory of each ball on the diagram.

A. What do you notice?

No matter where I move him the ball drops straight down to his feet.

B. The ball is pulled by a force called **gravity**. In what direction does gravity always pull the ball?

Designing Effective Instructional Tasks for Physical Education and Sports David Charles Griffey, Lynn Dale Housner, 2007
There is more to helping participants develop motor skills than just coming up with relevant drills. If you want participants to succeed, you need to structure learning tasks to keep them interested and engaged. Although there are many resources available to help teachers and coaches improve their curriculum teaching skills and management, little has been written about the critical issue of effective task design until now. This text takes the most current research on learning and teaching movement activity and translates it into practical, down-to-earth suggestions for coaches and teachers. Using examples both in the gym and on the playing field, the book shows teachers and coaches alike how to develop instructional tasks that maximize students' learning and retention.
