Robotic Vision Peter Corke, 2021-10-15 This textbook offers a tutorial introduction to robotics and Computer Vision which is light and easy to absorb The practice of robotic vision involves the application of computational algorithms to data Over the fairly recent history of the fields of robotics and computer vision a very large body of algorithms has been developed However this body of knowledge is something of a barrier for anybody entering the field or even looking to see if they want to enter the field What is the right algorithm for a particular problem and importantly How can I try it out without spending days coding and debugging it from the original research papers The

author has maintained two open source MATLAB Toolboxes for more than 10 years one for robotics and one for vision The key strength of the Toolboxes provide a set of tools that allow the user to work with real problems not trivial examples For the student the book makes the algorithms accessible the Toolbox code can be read to gain understanding and the examples illustrate how it can be used instant gratification in just a couple of lines of MATLAB code The code can also be the starting point for new work for researchers or students by writing programs based on Toolbox functions or modifying the Toolbox code itself The purpose of this book is to expand on the tutorial material provided with the toolboxes add many more examples and to weave this into a narrative that covers robotics and computer vision separately and together The author shows how complex problems can be decomposed and solved using just a few simple lines of code and hopefully to inspire up and coming researchers The topics covered are guided by the real problems observed over many years as a practitioner of both robotics and computer vision It is written in a light but informative style it is easy to read and absorb and includes a lot of Matlab examples and figures The book is a real walk through the fundamentals light and color camera modelling image processing feature extraction and multi view geometry and bring it all together in a visual servo system An authoritative book reaching across fields thoughtfully conceived and brilliantly accomplished Oussama Khatib Stanford *Robotics, Vision and Control* Peter Corke, 2017-05-20 Robotic vision the combination of robotics and computer vision involves the application of computer algorithms to data acquired from sensors The research community has developed a large body of such algorithms but for a newcomer to the field this can be quite daunting For over 20 years the author has maintained two open source MATLAB Toolboxes one for robotics and one for vision They provide implementations of many important algorithms and allow users to work with real problems not just trivial examples This book makes the fundamental algorithms of robotics vision and control accessible to all It weaves together theory algorithms and examples in a narrative that covers robotics and computer vision separately and together Using the latest versions of the Toolboxes the author shows how complex problems can be decomposed and solved using just a few simple lines of code The topics covered are guided by real problems observed by the author over many years as a practitioner of both robotics and computer vision It is written in an accessible but informative style easy to read and absorb and includes over 1000 MATLAB and Simulink examples and over 400 figures The book is a real walk through the fundamentals of mobile robots arm robots then camera models image processing feature extraction and multi view geometry and finally bringing it all together with an extensive discussion of visual servo systems This second edition is completely revised updated and extended with coverage of Lie groups matrix exponentials and twists inertial navigation differential drive robots lattice planners pose graph SLAM and map making restructured material on arm robot kinematics and dynamics series elastic actuators and operational space control Lab color spaces light field cameras structured light bundle adjustment and visual odometry and photometric visual servoing An authoritative book reaching across fields thoughtfully conceived and brilliantly accomplished OUSSAMA KHATIB Stanford **Books in Print** ,1994
