A Practical Guide To Splines:

A Practical Guide to Splines Carl De Boor, 1978 This book is based on the author's experience with calculations involving polynomial splines presenting those parts of the theory especially useful in calculations and stressing the representation of splines as weighted sums of B splines The B spline theory is developed directly from the recurrence relations without recourse to divided differences This reprint includes redrawn figures and most formal statements are accompanied by proofs

A Practical Guide to Splines Carl de Boor, 2001-12-13 This book is based on the author's experience with calculations involving polynomial splines presenting those parts of the theory especially useful in calculations and stressing the representation of splines as weighted sums of B splines The B spline theory is developed directly from the recurrence relations without recourse to divided differences This reprint includes redrawn figures and most formal statements are accompanied by proofs

Handbook of Computer Aided Geometric Design G. Farin, J. Hoschek, M.-S. Kim, 2002-08-13 This book provides a comprehensive coverage of the fields Geometric Modeling Computer Aided Design and Scientific Visualization or Computer Aided Geometric Design Leading international experts have contributed thus creating a one of a kind collection of authoritative articles There are chapters outlining basic theory in tutorial style as well as application oriented articles Aspects which are covered include Historical outline Curve and surface methods Scientific Visualization Implicit methods Reverse engineering This book is meant to be a reference text for researchers in the field as well as an introduction to graduate students wishing to get some exposure to this subject

Spline Functions Larry L. Schumaker, 2015-01-01 This book describes in detail the key algorithms needed for computing with spline functions and illustrates their use in solving several basic problems in numerical analysis including function approximation numerical quadrature data fitting and the numerical solution of PDE's The focus is on computational methods for bivariate splines on triangulations in the plane and on the sphere although both univariate and tensor product splines are also discussed The book contains numerous examples and figures to illustrate the methods and their performance All of the algorithms in the book have been coded in a separate MATLAB package available for license The package can be used to run all of the examples in the book and also provides readers with the essential tools needed to create software for their own applications In addition to the included bibliography a list of over 100 pages of additional references can be found on the book's website

Theory and Practice of Geometric Modeling Wolfgang Straßer, Hans-Peter Seidel, 2012-12-06 This book is a result of the lectures and discussions during the conference Theory and Practice of Geometric Modeling The event has been organized by the Wilhelm Schickard Institut für Informatik Universität Tübingen and took place at the Heinrich Fabri Institut in Blaubeuren from October 3 to 7 1988 The conference brought together leading experts from academic and industrial research institutions CAD system developers and

experienced users to exchange their ideas and to discuss new concepts and future directions in geometric modeling The main intention has been to bridge the gap between theoretical results performance of existing CAD systems and the real problems of users The contents is structured in five parts A Algorithmic Aspects B Surface Intersection Blending Ray Tracing C Geometric Tools D Different Representation Schemes in Solid Modeling E Product Modeling in High Level Specifications The material presented in this book reflects the current state of the art in geometric modeling and should therefore be of interest not only to university and industry researchers but also to system developers and practitioners who wish to keep up to date on recent advances and new concepts in this rapidly expanding field The editors express their sincere appreciation to the contributing authors and to the members of the program committee W Boehm J Hoschek A Massabo H Nowacki M Pratt J Rossignac T Sederberg and W Tiller for their close cooperation and their time and effort that made the conference and this book a success

Modeling Time-Varying Unconditional Variance by Means of a Free-Knot Spline-GARCH Model Oliver Old,2022-07-27 The book addresses the problem of a time varying unconditional variance of return processes utilizing a spline function The knots of the spline functions are estimated as free parameters within a joined estimation process together with the parameters of the mean the conditional variance and the spline function With the help of this method the knots are placed in regions where the unconditional variance is not smooth The results are tested within an extensive simulation study and an empirical study employing the S P500 index
