A320 Air Conditioning System

The Airbus A320 Air Conditioning System is fully automatic. It continuously refreshes the air and maintains a selected temperature in three distinct zones: the cockpit, forward cabin, and aft cabin. Each zone's temperature is controlled independently.

The pneumatic system supplies air through two-pack flow control valves, two packs, and a mixing unit which mixes the air that comes from the cabin and the packs. This mixed air is then distributed throughout the cockpit and cabin.

The temperature in the flight deck and cabin can be adjusted from the cockpit's air conditioning panel. The temperature regulation is managed by the two Air Conditioning System Controllers (ACSC).

Aerodynamic Design of Transport Aircraft Tobie van den Berg, 2009-04-15 The origin of Aerodynamic Design of Transport Aircraft stems from the time when the author was appointed part time professor in the Aerospace Faculty of Delft University of Technology At the time his main activities were those of leading the departments of Aerodynamics Performance and Preliminary Design at Fokker Aircraft Company The groundwork for this book started in 1987 as a series of lecture notes consisting mainly of pictorial material with a minimum of English explanatory text After the demise of Fokker in 1996 one feared that interest in aeronautical engineering would strongly diminish As a result of this the course was discontinued and the relationship between the author and the faculty came to an end Two years later the situation was reappraised and the interest in aeronautical engineering remained so the course was reinstated with a former Fokker colleague Ronald Slingerland as lecturer The lecture notes from these courses form the foundation of this publication
