

# Cognitive load theory

## making it work with instructional design

Cognitive load theory (CLT) highlights how our brains handle information, offering instructional designers valuable strategies to create engaging, effective courses. With today's information overload, understanding our brain's limits is essential to avoid learner frustration.

### The three types of cognitive load theory

#### Germane load

This is the mental effort of organizing and integrating new information. This is where the real learning happens.

#### Intrinsic load

This refers to the complexity inherent to the task or content itself. Some concepts are just complex - there's no "low-wash load" to make quantum physics simple.

#### Extraneous load

The mental equivalent of background noise - poor instructional design, distractions, or irrelevant information that gets in the way.

## Tips to apply cognitive load theory

#### Chunk content

Breaking down information into smaller "chunks" can make complex topics more manageable. Take project management for instance. - Instead of dumping the entire methodology in one go, serve it up in defined portions: planning, execution, and review.

#### Embrace the power of less

Those fancy animations and decorative images? Unless they're pulling their weight in exploring concepts, show them the door. Remember: every unnecessary element is like a mental tax on your learner's attention.

#### Use scaffolding techniques

Start with plenty of support, then slowly ease off as learners find their balance. Begin with guided practice, transition to collaborative work, and finally let them fly solo. It's like teaching someone to ride a bike - you don't just push them down a hill and hope for the best.

#### Show, don't just tell

Worked examples are your secret weapon against confusion. Instead of throwing learners into the deep end, walk them through solutions step-by-step, and then let them practice similar scenarios. Seeing is believing (and understanding).

#### Design with the eyes in mind

Your layout shouldn't look like a game of "where's wally?" Use white space to create a clean look and align text with relevant visuals to avoid "split attention" (Sweller, Ayres, & Kalyuga, 2016).
