NASA Technical Memorandum ,1988 **Engine Structures** ,1988 **Scientific and Technical Aerospace Reports** ,1991 Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database **Solar Energy Update** ,1980 *Reliability-based Design Optimization of Composite Wind Turbine Blades for Fatigue Life Under Wind Load Uncertainty* Weifei Hu,2015 The objectives of this study are 1 to develop an accurate and efficient fatigue analysis procedure that can be used in reliability analysis and reliability based design optimization RBDO of composite wind turbine blades 2 to develop a wind load uncertainty model that provides realistic uncertain wind load for the reliability analysis and the RBDO process and 3 to obtain an optimal composite wind turbine blade that satisfies target reliability for durability under the uncertain wind load The current research effort involves 1 developing an aerodynamic analysis method that can effectively calculate detailed wind pressure on the blade surface for stress analysis 2 developing a fatigue failure criterion that can cope with non proportional multi axial stress states in composite wind turbine blades 3 developing a wind load uncertainty model that represents realistic uncertain wind load for fatigue reliability of wind turbine systems 4 applying the wind load uncertainty model into a composite wind turbine blade and obtaining an RBDO optimum design that satisfies a target probability of failure for a lifespan of 20 years under wind load uncertainty In blade fatigue analysis resultant aerodynamic forces are usually applied at the aerodynamic centers of the airfoils of a blade to calculate stress strain However in reality the wind pressures are applied on the blade surface A wind turbine blade is often treated as a typical beam like structure for which fatigue life calculations are limited in the edge wise and or flap wise directions Using the beam like structure existing fatigue analysis methods for composite wind turbine blades cannot cope with the non proportional multi axial stress states that are endured by wind turbine blades during operation **Annual Review of Materials Research** ,2005 **The Shock and Vibration Digest** ,2003 **Energy Research Abstracts** ,1977 Semiannual with semiannual and annual indexes References to all scientific and technical literature coming from DOE its laboratories energy centers and contractors Includes all works deriving from DOE other related government sponsored information and foreign nonnuclear information Arranged under 39 categories e g Biomedical sciences basic studies Biomedical sciences applied studies Health and safety and Fusion energy Entry gives bibliographical information and abstract Corporate author subject report number indexes
