Blockchain and the Law Primavera De Filippi, Aaron Wright, 2018-04-09 How does Bitcoin mine money from 1s and 0s Through blockchain a tool for creating secure decentralized peer to peer applications The technology has been compared to the Internet in impact But disintermediation blockchain s greatest benefit cuts out oversight along with middlemen Blockchain and the Law urges the law to catch up *Elgar Encyclopedia of Cryptocurrencies, Blockchain and DLT* Roman Beck, 2026-02-16 This illuminating Encyclopedia presents a comprehensive overview of cryptocurrencies blockchain and distributed ledger technologies clarifying developing terminology in order to provide a key reference point for navigating this evolving domain [The Economics of Blockchain and Cryptocurrency](#) Caton, James L., 2022-10-20 This timely book is an innovative look at how blockchain technology will transform the structure of social and economic life The security of blockchain supports the provision and maintenance of reliable databases and the creation of rule based governance protocols Leading contributors expertly review the impact of blockchain on existing structures of law monetary systems supply chains and business organizations [Digital Currencies and Energy Consumption](#) Mr. Itai Agur, Jose Deodoro, Xavier Lavayssière, Soledad Martinez Peria, Mr. Damiano Sandri, Hervé Tourpe, Mr. German Villegas Bauer, 2022-06-07 Whether in crypto assets or in CBDCs design choices can make an important difference to the energy consumption of digital currencies This paper establishes the main components and technological options that determine the energy profile of digital currencies It draws on academic and industry estimates to compare digital currencies to each other and to existing payment systems and derives implications for the design of environmentally friendly CBDCs For distributed ledger technologies the key factors affecting energy consumption are the ability to control participation and the consensus algorithm While crypto assets like Bitcoin are wasteful in terms of resources other designs could be more energy efficient than existing payment systems

Security Protocols XXVI Vashek Matyáš, Petr Švenda, Frank Stajano, Bruce Christianson, Jonathan Anderson, 2018-11-23 This book constitutes the thoroughly refereed post workshop proceedings of the 26th International Workshop on Security Protocols held in Cambridge UK in March 2018 The volume consists of 17 thoroughly revised invited papers presented together with the respective transcripts of discussions The theme of this year s workshop was fail safe and fail deadly concepts in protocol design The topics covered included failures and attacks novel protocols threat models and incentives cryptomoney and the interplay of cryptography and dissent **Blockchain Revolution** Don Tapscott, Alex Tapscott, 2016-05-10 Blockchain technology is powering our future As the technology behind cryptocurrencies like bitcoin and Facebook s Libra open software platforms like Ethereum and disruptive companies like Ripple it s too important to ignore In this revelatory book Don Tapscott the bestselling author of Wikinomics and his son blockchain expert Alex Tapscott bring us a brilliantly researched highly readable and essential book about the technology driving the future of the economy Blockchain is the ingeniously simple revolutionary protocol that allows transactions to be simultaneously anonymous and

secure by maintaining a tamperproof public ledger of value. Though it's best known as the technology that drives bitcoin and other digital currencies, it also has the potential to go far beyond currency to record virtually everything of value to humankind: from birth and death certificates to insurance claims, land titles, and even votes. Blockchain is also essential to understand if you're an artist who wants to make a living off your art, a consumer who wants to know where that hamburger meat really came from, an immigrant who's tired of paying big fees to send money home to your loved ones, or an entrepreneur looking for a new platform to build a business. And those examples are barely the tip of the iceberg. As with major paradigm shifts that preceded it, blockchain technology will create winners and losers. This book shines a light on where it can lead us in the next decade and beyond.

Model Structure for Block Chain Technology and Cryptocurrency for the Financial Services Sector in Zimbabwe Gabriel Kabanda, 2021-09-13 Academic Paper from the year 2021 in the subject Computer Sciences Cryptocurrency grade 1.0 language English abstract The study was purposed to develop the model structure for Blockchain technology and cryptocurrency and determine the factors that influence the adoption of Blockchain technology and cryptocurrency in Zimbabwe in order to make value adding contributions to the cybersecurity risk management of the financial services sector. Cybersecurity is the collection of policies, techniques, technologies, and processes that work together to protect the confidentiality, integrity, and availability of computing resources, networks, software, programs, and data from attack. Cybersecurity threats have thus shifted from the cryptocurrency to attacking platforms using the cryptocurrency such as crypto exchanges. Essentially, there would be no bitcoin without Blockchain, but Blockchain exists without bitcoin. The entire system works with a distributed ledger technology that operates on a decentralized pattern. The blockchain is distributed and highly available, exhibits irreversibility and immutability, and eliminates intermediaries in the banking sector. For the Blockchain to function fully, it requires components such as the Node, Transaction, Block, as a data structure, Chain of the blocks, Miners to perform the block verification process, and Consensus, consensus protocol. The Mixed Method methodology was used. The research utilized focus groups and document analysis to gather knowledge on the subject. A survey was conducted which included distribution of questionnaires and conducting interviews with heads of the banking sector.

Is the consumer willing to adopt the innovative cryptocurrency Bitcoin as a payment method? Liutauras Rokas, 2020-04-28 Master's Thesis from the year 2019 in the subject Computer Sciences Cryptocurrency grade 2.7 course INNOVATION AND TECHNOLOGY MANAGEMENT language English abstract Is the consumer willing to adopt the innovative blockchain-based cryptocurrency Bitcoin as a payment method? The aim of this work is to assess the European consumer's intention to use Bitcoin for payments. Bitcoin is not yet defined in many ways. The role of the consumer is important as consumers play a significant role in technology adoption. In this work, Bitcoin is investigated from the consumer's perspective as an available innovative payment method. A literature review allowed characterizing Bitcoin and to outline factors that have an effect on the consumer's intention to adopt this innovative technology for payments. These factors

compatibility as in Innovation Diffusion Theory and perceived risk were integrated with a theoretical research model Technology Acceptance Model and its constructs perceived ease of use perceived usefulness and behavioral intention in order to predict the consumer s intention to use Bitcoin for payments The proposed model was empirically tested using data collected from a survey of European consumers The Structural Equation Modeling SEM technique was used to evaluate this research model and a Confirmatory Factor Analysis CFA was performed to test the reliability and validity of the proposed measurement model

Designing Efficient and Secure Algorithms for Payment Channel Networks Sonbol Rahimpour, 2022 Major blockchains such as Bitcoin and Ethereum suffer from scalability issues For instance, Bitcoin can handle up to about 7 transactions per

second whereas custodian payment networks such as Visa can handle tens of thousands of transactions per second One of the promising solutions to scale blockchains such as Bitcoin is Payment Channel Networks PCNs In this thesis we propose new solutions to make the existing PCNs such as the Bitcoin s Lightning network more efficient and secure Chapter 3 studies watchtowers which are entities that watch the blockchain on behalf of their offline clients to protect the clients payment channels In practice there is no trust between clients and watchtowers and it is challenging to incentivize watchtowers to well behave e g to refuse bribery To tackle this problem Chapter 3 proposes a novel reputation system and uses the system to incentivize watchtowers to not only deliver their promised service but also reduce their service fees in competition with each other Chapter 4 proposes Spear a new multi path payment method that can support redundant payments We show that this redundant payments can significantly improve the success rate of payment transfers in the Lightning network The challenge in supporting redundant payments is that the recipient may overdraw funds from the redundant paths In Chapter 4 we explain how this can be done without requiring high computation or major changes to the Lightning network Finally Chapter 5 presents a powerful probing technique called Torrent to discover balances of channels in the Lightning network Unlike the existing techniques Torrent uses multi path payments instead of single path payments This together with a novel max flow algorithm designed for the Lightning Network allows a single probing node to push a large flow of payments through a target channel making it possible to discover balances of even remote channels Another major advantage of Torrent is that it can speed up balance discovery through parallel payment transfers and pre computation of payment paths

The Bitcoin Standard Saifedean Ammous, 2018-04-24 A comprehensive and authoritative exploration of Bitcoin and its place in monetary history When a pseudonymous programmer introduced a new electronic cash system that s fully peer to peer with no trusted third party to a small online mailing list in 2008 very few people paid attention Ten years later and against all odds this upstart autonomous decentralized software offers an unstoppable and globally accessible hard money alternative to modern central banks The Bitcoin Standard analyzes the historical context to the rise of Bitcoin the economic properties that have allowed it to grow quickly and its likely economic political and social implications While Bitcoin is an invention of the digital age the problem it purports to solve is as old as human society itself transferring value across time and space Author Saifedean Ammous takes the reader on an engaging journey through the history of technologies performing the functions of money from primitive systems of trading limestones and seashells to metals coins the gold standard and modern government debt Exploring what gave these technologies their monetary role and how most lost it provides the reader with a good idea of what makes for sound money and sets the stage for an economic discussion of its consequences for individual and societal future orientation capital accumulation trade peace culture and art Compellingly Ammous shows that it is no coincidence that the loftiest achievements of humanity have come in societies enjoying the benefits of sound monetary regimes nor is it coincidental that monetary collapse has usually accompanied civilizational collapse With this background in place the book

moves on to explain the operation of Bitcoin in a functional and intuitive way Bitcoin is a decentralized distributed piece of software that converts electricity and processing power into indisputably accurate records thus allowing its users to utilize the Internet to perform the traditional functions of money without having to rely on or trust any authorities or infrastructure in the physical world Bitcoin is thus best understood as the first successfully implemented form of digital cash and digital hard money With an automated and perfectly predictable monetary policy and the ability to perform final settlement of large sums across the world in a matter of minutes Bitcoin's real competitive edge might just be as a store of value and network for the final settlement of large payments a digital form of gold with a built in settlement infrastructure Ammous firm grasp of the technological possibilities as well as the historical realities of monetary evolution provides for a fascinating exploration of the ramifications of voluntary free market money As it challenges the most sacred of government monopolies Bitcoin shifts the pendulum of sovereignty away from governments in favor of individuals offering us the tantalizing possibility of a world where money is fully extricated from politics and unrestrained by borders The final chapter of the book explores some of the most common questions surrounding Bitcoin Is Bitcoin mining a waste of energy Is Bitcoin for criminals Who controls Bitcoin and can they change it if they please How can Bitcoin be killed And what to make of all the thousands of Bitcoin knockoffs and the many supposed applications of Bitcoin's block chain technology The Bitcoin Standard is the essential resource for a clear understanding of the rise of the Internet's decentralized apolitical free market alternative to national central banks

Analysis of Bitcoin as a Peer-to-peer Network for International Payments Sascha Böhme, Massachusetts Institute of Technology. Engineering Systems Division, System Design and Management Program, 2014 The payment system is due for an overhaul The antiquated infrastructure that runs the funds transfer network belongs to the pre Internet era As a result international payments are expensive slow cumbersome and not as secure as they could be This thesis argues that the cryptocurrency Bitcoin is the answer to the problems facing millions of consumers merchants and remitters worldwide The analysis is based on two frameworks The first one is used to measure how well Bitcoin's attributes meet the needs of the users of the payment system The second one is used to decide if the payments industry is likely to have one or more dominant platform leaders

High-efficiency Cryptocurrency Routing in Payment Channel Networks Vibhaalakshmi Sivaraman, 2019 With the growing usage of Bitcoin and other cryptocurrencies many scalability challenges have emerged A promising scaling solution exemplified by the Lightning Network uses a network of bidirectional payment channels that allows fast transactions between two parties However routing payments on these networks efficiently is non trivial since payments require finding paths with sufficient funds and channels can become unidirectional over time blocking further transactions through them Today's payment channel networks PCNs exacerbate these problems by attempting to deliver all payments atomically This thesis presents the Spider protocol a protocol inspired by congestion control for data networks that addresses these challenges We formalize the PCN routing problem as an optimization problem and motivate Spider using that Spider splits

payments into transaction units and uses an explicit multipath transport protocol to control the rates at which the transaction units are sent through the PCN Spider routers signal congestion to end hosts based on observed queuing delay and end hosts accordingly adjust sending rates on their paths This thesis shows through extensive simulations that Spider requires less than 25% of the funds needed by state of the art approaches to successfully route over 95% of the transactions across a wide range of synthetic and real topologies Our improvements are significant across all sizes of transactions Spider completes 40% more of the largest 25% of transactions attempted on the real Lightning Network topology compared to the state of the art

Incentivized Delivery Network of IoT Software Updates Based on Proofs-of-distribution Oded Leiba,2019 In this paper we introduce IoTPatchPool a novel scheme that enables an incentivized distributed delivery network of IoT software updates We use a decentralized storage network for reducing the load on the vendor when distributing patches towards IoT devices and eliminating central points of failure Unlike existing peer to peer file sharing networks which have a fundamental availability problem for unpopular files our protocol utilizes blockchain based smart contracts to incentivize independent peers termed distributors by means of cryptocurrency payments A vendor of IoT devices deploys a smart contract with a deposit which acts as a publicly verifiable binding bid for delivery of patches to a specific set of IoT endpoints Distributors will compete for delivering the updates to the desired IoT devices and present proofs of distribution in exchange for cryptocurrency payments We address the fair exchange problem between distributors and the consuming IoT devices by utilizing a variation of the Zero Knowledge Contingent Payments ZKCP protocol ensuring that the process is trustless This can encourage the participation of a large number of distributors and thus facilitate a rapid scale out of the system Finally we present and evaluate a prototype implementation combining the BitTorrent network with the blockchain platform Ethereum abstract
