Abstract. Aside of day-to-day business in some organizations Enterprise Architecture (EA) seems to be successful while it is not in others that also have notations, models, methods, and even dedicated EA tools. In order to understand these differences we have analyzed the development of EA in six companies over the last eight years. Our analyses showed, that apart from formal structure and processes (i) training and education of architects and non-architects, (ii) improving architects' communication skills, (iii) intensifying EA representation in projects, and (iv) tool support (not replacements with tools), significantly contribute to long term EA success.

1 Introduction

Enterprise Architecture (EA) is a still developing discipline. It includes rich modeling approaches as well as procedure models and tools. Both contributions from practitioners [see e.g. 1] and research [see e.g. 2] are numerous and show both progress and growing maturity. From a research point of view the scope of EA and EA management seems to be well-defined by now [2], although terminology is still varying. For practitioners it seems to be a unique opportunity to get a grip on the ever growing complexity of their application landscapes.

Standardization efforts like TOGAF [3] offer means to establish EA processes. Corresponding efforts e.g. like CobIT [4] increase governance maturity and ensure well defined interfaces to related IT management fields—governance, IT strategy, business/IT alignment etc. However, although EA is spreading among practitioners, it still seems to be immature in practice. With all processes set up according to the standards and modeling and maintaining most artifacts as recommended by EA management approaches: does EA work and will it survive in any company? Some of the companies, which established EA and EA management processes in the past, are now facing obstacles when practicing EA and are struggling to redefine their EA management in a way making it more sustainable.

Therefore the research question in this contribution is: What are factor combinations for successful EA implementation beyond the mere notion of maturity? As a basis of our analysis we will employ a description framework which has been developed in the course of various practitioners' workshops over the last eight years. Based on this description framework we will analyze six cases and discuss why certain companies have been rather successful in implementing EA while others did not leverage

for starting organizing and operating the entirety of your organization's architecture Chapter 1 Ready shows how to model and analyze your business operations assess their current status construct a future scenario compare it to the current structure analyze what you see and show the result in a city plan Chapter 2 Set deals with preparing for the implementation of the architecture with governance enterprise architecture organization staffing etc This is the organizing step before beginning the actual work Chapter 3 Go establishes how to implement a city plan in practice It deals with the practicalities of working as an enterprise architect and is called the running step The common thread through all aspects of the enterprise architect's work is the architect's mastery of a number of tools such as business models process models information models and matrices We address how to initiate the architecture process within the organization in such a way that the overarching enterprise architecture and architecture driven approach can be applied methodically and gradually improved **CMG '92, Reno**, 1992 Complex Enterprise Architecture John D. McDowall, 2019-02-07 Implement successful and cost effective enterprise architecture projects This book provides a new approach to developing enterprise architecture based on the idea of emergent behaviors where instead of micromanaging system implementation the enterprise architecture effort establishes clear goals and leaves the details to the implementation teams System development efforts are measured based on their contribution to achieving business goals instead of implementing specific possibly outdated requirements Most enterprise architecture initiatives employ one of the existing system architecture frameworks such as Zachman or The Open Group Architecture Framework but these are not well suited for enterprise architecture in a modern agile organization The new approach presented in this book is based on the author's experience with large enterprise architecture efforts The approach leverages research into complex adaptive systems and emergent behaviors where a few simple rules result in complex and efficient enterprise behaviors Simplifying the task of establishing and maintaining the enterprise architecture cuts the costs of building and maintaining the architecture and frees up those resources for more productive pursuits System implementers are given the freedom to rapidly adapt to changing user needs without the blessing of the enterprise modeling priesthood and the architecture is transformed from a static pile of obscure models and documents into an operational framework that can be actively used to manage an enterprise's resources to better achieve business goals The enterprise architect is free to stop focusing on building and maintaining models and start focusing on achieving business goals What You'll Learn Refocus enterprise architecture on business needs by eliminating most of the enterprise level models Delegate tasks to the development teams who do system implementation Document business goals establish strategies for achieving those goals and measure progress toward those goals Measure the results and gauge whether the enterprise architecture is achieving its goals Utilize appropriate modeling techniques that can be effectively used in an enterprise architecture Who This Book Is For Architecture practitioners and architecture managers Practitioners are experienced architects who have used existing frameworks such as Zachman and have experience with formal architecture modeling and or model based system
