

- The most prominent theoretical approaches to the glass transition are the **Adams – Gibbs** and the **Free Volumes** theories.
- The **Adams-Gibbs** theory is the first to consider the glass transition as a cooperative process.
- In the **free volume** approach T_v is considered to be the temperature at which the free volume would be zero.

Adams Theories:

A history of American political theories Charles Edward Merriam, 1920 Elgar Introduction to Organizational Stress Theories O'Brien, Kimberley E., Cooper, Cary, 2022-07-19 How and why does job stress manifest as negative emotions disordered thoughts deleterious behaviors and physical illness How can positive outcomes like growth and mastery be encouraged instead Job stress theories provide insights that guide practical decision making on how to mitigate the negative effects and promote the positive outcomes for organizations and individuals This book provides a review of empirical research on nearly 100 frameworks and hypotheses regarding job stress as well as suggestions for the integration and refinement of both popular and overlooked theories **Recent Theories of Sovereignty** Xujing Chen, 1929 *Homotopy Theory: Tools and Applications* Daniel G. Davis, 2019-05-30 This volume contains the proceedings of the conference Homotopy Theory Tools and Applications in honor of Paul Goerss's 60th birthday held from July 17-21, 2017 at the University of Illinois at Urbana-Champaign Urbana IL The articles cover a variety of topics spanning the current research frontier of homotopy theory This includes articles concerning both computations and the formal theory of chromatic homotopy different aspects of equivariant homotopy theory and K theory as well as articles concerned with structured ring spectra cyclotomic spectra associated to perfectoid fields and the theory of higher homotopy operations *Connective Real K -Theory of Finite Groups* Robert Ray Bruner, John Patrick Campbell Greenlees, 2010 This book is about equivariant real and complex topological K theory for finite groups Its main focus is on the study of real connective K theory including ko as a ring and ko_{-BG} as a module over it In the course of their study the authors define equivariant versions of connective KO theory and connective K theory with reality in the sense of Atiyah which give well behaved Noetherian uncompleted versions of the theory They prove local cohomology and completion theorems for these theories giving a means of calculation as well as establishing their formal credentials In passing from the complex to the real theories in the connective case the authors describe the known failure of descent and explain how the eta Bockstein spectral sequence provides an effective substitute This formal framework allows the authors to give a systematic calculation scheme to quantify the expectation that ko should be a mixture of representation theory and group cohomology It is characteristic that this starts with ku and then uses the local cohomology theorem and the Bockstein spectral sequence to calculate ku_{-BG} and ko_{-BG} To give the skeleton of the answer the authors provide a theory of ko characteristic classes for representations with the Pontrjagin classes of quaternionic representations being the most important Building on the general results and their previous calculations the authors spend the bulk of the book giving a large number of detailed calculations for specific groups cyclic quaternion dihedral A_4 and elementary abelian 2 groups The calculations illustrate the richness of the theory and suggest many further lines of investigation They have been applied in the verification of the Gromov Lawson Rosenberg conjecture for several new classes of finite groups This book is about equivariant real and complex topological K theory for finite groups

Its main focus is on the study of real connective K theory including ko BG as a ring and ko_BG as a module over it. In the course of their study the authors define equivariant versions of connective KO theory and connective K theory with reality in the sense of Atiyah which give well behaved Noetherian uncompleted versions of the theory. They prove local cohomology and completion theorems for these theories giving a means of calculation as well as establishing their formal credentials. In passing from the complex to the real theories in the connective case the authors describe the known failure of descent and explain how the eta Bockstein spectral sequence provides an effective substitute. This formal framework allows the authors to give a systematic calculation scheme to quantify the expectation that ko BG should be a mixture of representation theory and group cohomology. It is characteristic that this starts with ku BG and then uses the local cohomology theorem and the Bockstein spectral sequence to calculate ku_BG , ko BG and ko_BG . To give the skeleton of the answer the authors provide a theory of ko characteristic classes for representations with the Pontrjagin classes of quaternionic representations being the most important. Building on the general results and their previous calculations the authors spend the bulk of the book giving a large number of detailed calculations for specific groups: cyclic, quaternion, dihedral, A_4 and elementary abelian 2 groups. The calculations illustrate the richness of the theory and suggest many further lines of investigation. They have been applied in the verification of the Gromov Lawson Rosenberg conjecture for several new classes of finite groups.

Sociological Theory Bert N. Adams, R. A. Sydnie, 2001-01-30. This book connects theorists and their work to larger themes and ideas. All too often in the opinion of the authors theory texts focus too much on individual theorists and insufficiently on the relationship between their theories and how these have contributed in turn to the evolution of ideas concerning social life. Treatment of individual theories and theorists is balanced with the development of key themes: ideas about social life introduced in Chapter 1 which then reappear in the discussion of individual theorists and their work. A key organizing principle of this text is to trace major schools of thought over the past 150 years as they appear and reappear in different chapters. Section 1 introductions help remind students of the big picture within which any given theory or theorist is only one part. A consistent organization and presentation within chapters helps provide students with a context for learning and a means of much more easily comparing and contrasting theorists and their ideas. Important new voices in a text for social theory. In Chapter 2 Harriet Martineau is introduced as one of sociology's founders. From then on the views of women theorists and others are represented in far more than token fashion. Examples include W. E. B. DuBois, Marianne Weber, Charlotte Gilman, Rosa Luxemburg, Joseph Schumpeter, V. I. Lenin, Niklas Luhmann, Theda Skocpol, Erik Wright, Elman Service, Arlie Hochschild, Dorothy Smith, Patricia Hill Collins, and Immanuel Wallerstein. A timeline showing when social theorists lived and wrote and connecting their biographies to important social events over 300 years is at the back of the text. The organization of every chapter along similar lines provides a consistency in presentation that encourages comparisons among the theorists. The authors do a very good job presenting overlooked theorists and making their relevance to social theorizing doing sociology

clear Joan Alway formerly University of Miami The strengths of this text are the breadth of theories covered the integration of gender related topics family work religion the use of substantial quotes from primary texts the consistent inclusion of methodological issues and the goals of the project to provide an expansive and readable theory text I have no doubt that it will find a solid position in the field of popular theory texts for undergraduate course use Kathleen Slobin North Dakota State University *Middle Knowledge* E. Dekker,2000 The theory of Middle Knowledge ascribes to God a particular type of knowledge that he sees not simply what each free creature could do in any circumstance but what it would do in any circumstance This type of knowledge is claimed to be helpful to explain how God has perfect foreknowledge while creatures are free But is such a knowledge possible even for God The author argues that the arguments against it do not stand and that therefore the theory of Middle Knowledge is tenable The arguments against the coherence of Middle Knowledge are examined of which the most important is that counterfactuals of freedom could not exist chapter 2 Then the arguments against the adequacy of the theory of Middle Knowledge are examined such as whether or not counterfactual power over the past is implied by the theory of Middle Knowledge chapter 3 A separate chapter is devoted to background problems such as the specific concept of freedom the notion of God s concurrence and our view on the nature of possible worlds chapter 4
