Bio Design Nature Science Creativity:

Bio Design William Myers,2014 Bio Design examines some seventy projects concepts prototypes and completed designs that cover the fields of architecture industrial processes education fine art material engineering and bioengineering Each project is illustrated by a short text images and captions that combine to explain the problems the venture tackles and how living materials and processes were harnessed to solve them in sustainable and aesthetically pleasing ways Designers and artists have always looked to nature for inspiration and materials but only recently have they been able to alter and incorporate living organisms in their work In a world with finite resources and a growing population design that mimics or appropriates the sustainable template of nature is likely to prove as vital as it is novel Many of the solutions also provoke thought about manipulating life for human ends From bacteria that can spin microfibrils of pure cellulose for use in the clothing industry to pigeons that fed special bacteria excrete harmless detergent instead of faeces and from lamps that require blood to function to genetically hacked plants with human DNA biological design is science future here and now

Structures and Architecture. A Viable Urban Perspective? Marie Frier Hvejsel,Paulo J.S. Cruz,2022-07-08 Structures and Architecture A Viable Urban Perspective contains the research papers and prototype submissions 1448 pages presented at the Fifth International Conference on Structures and Architecture ICSA2022 Aalborg Denmark 6 8 July 2022 The contributions on creative and scientific aspects in the conception and construction of structures as architecture and on the role of advanced digital industrial and craft based technologies in this matter represent a critical blend of scientific technical and practical novelties in both fields Hence as part of the proceedings series Structures and Architecture the volume adds to a continuous exploration and development of the synergetic potentials of the fields of Structures and Architecture With each volume further challenging the conditions problems and potentials related to the art practice and theory of teaching researching designing and building structures as vehicles towards a viable architecture of the urban environment The volumes of the series appear once every three years in tandem with the conferences organized by the International Association of Structures and Architecture and are intended for a global readership of researchers practitioners and students including architects structural and construction engineers builders and building consultants constructors material suppliers planners urban designers anthropologists economists sociologists artists product manufacturers and other professionals involved in the design and realization of architectural structural and infrastructural projects *NERD III - New Experimental Research in Design* Tom Bieling,Michelle Christensen,Florian Conradi,2025-05-06 Design has long established itself as an independent research competence The New Experimental Research in Design NERD series seeks to provide a public platform to reflect upon and discuss the specifically experimental dimension of the field The contributions from researchers from around the world exhibit a diverse and insightful range of approaches giving rise to further debate and action in the rapidly evolving field In times of multiple crises the authors in this volume strive to find tactics of response

They introduce experiments into more than human design co species production critical algorithmic immersion feminist engagements with new materialism and more From autoethnographic explorations to socially engaged methods they challenge not just the role of design in these times but the self positioning of the designer Experimental design Practice based research Design methods

Designer's Guide to Lab Practice Assia Crawford,2023-09-12 This book explores the growing field of bio design through interdisciplinary creative practice The volume illustrates a range of experimental working techniques while offering a foundational understanding of lab practice principles The book highlights the myriad of opportunities presented by microorganisms that have reshaped the planet and made it habitable The book provides an account of the creation of living materials from the point of view of an architectural design practitioner The transition from traditional design practice to laboratory investigation is captured highlighting strategies of creating partnerships across a range of fields The book demonstrates laboratory methods and ways of investigating the development of living materials and celebrates the growing body of practitioners scientists activists and anthropologists who are reimagining new strategies for addressing contemporary environmental challenges Designer s Guide to Lab Practice looks at ways in which integrating living components with needs of their own would not only help offset the environmental impact that we have on our planet but could also create a closer relationship with nature It is a working manual as well as a guide to emerging practitioners seeking to transition into a field that is yet to be defined and that offers the promise of a new era of human habitat making as a direct response to the looming ecological crisis

Advances in Manufacturing and Processing of Materials and Structures Yoseph Bar-Cohen,2018-09-03 Advances in Manufacturing and Processing of Materials and Structures cover the latest advances in materials and structures in manufacturing and processing including additive and subtractive processes It s intended to provide a compiled resource that reviews details of the advances that have been made in recent years in manufacturing and processing of materials and structures A key development incorporated within this book is 3D printing which is being used to produce complex parts including composites with odd shape fibers as well as tissue and body organs This book has been tailored for engineers scientists and practitioners in different fields such as aerospace mechanical engineering materials science and biomedicine Biomimetic principles have also been integrated Features Provides the latest state of the art on different manufacturing processes including a biomimetics viewpoint Offers broad coverage of advances in materials and manufacturing Written by chapter authors who are world class researchers in their respective fields Provides in depth presentation of the latest 3D and 4D technologies related to various manufacturing disciplines Provides substantial references in each chapter to enhance further study

Creative Practice Inquiry in Architecture Ashley Mason,Adam Sharr,2022-10-03 This collection introduces illustrates and advances fresh ideas about creative practice inquiry in architecture It concerns architectural knowledge how architects can use their distinctive skills habits and values to advance professional insight and how such insights can be extended to make wider contributions to society culture and scholarship It

shows how architectural ways of knowing and working can be mobilised as tools for research. Collected here are a series of creative practices that emerge out of architecture and actively engage with other fields and methods reaching across the academic landscape. Architectural inquiries collected in this book probe matters that lie beyond the obvious expectations, the conventions, the default of the discipline. Drawing, borrowing, adapting, dramatising, perhaps, experimenting, cartooning, the tools and methods of each inquiry vary but they all share a common outward gaze, engaging architectural ways of knowing with other disciplines and practices including the arts, biological sciences, ethnography and technology. Chapters gathered here offer insight not only into incipient modes and tools of architectural research but emerging ethical, practical and philosophical positions intimately tied to the creative practices involved. Setting out the idea of creative practice inquiry in architecture, this innovative volume offers a lively and resourceful contribution to a growing body of work on design as research. It will be of interest to students keen to pursue architectural ways of thinking and writing, practitioners who want to use their distinctive professional abilities to contribute to architectural and scholarly knowledge, and academics and doctoral candidates keen to engage with the burgeoning scholarly field of design research.

Textiles, Identity and Innovation: Design the Future Gianni Montagna, Cristina Carvalho, 2018-10-03. D_TEX presents itself as a starting point at a crossroads of ideas and debates around the complex universe of Textile Design in all its forms, manifestations and dimensions. The textile universe allied to mankind since its beginnings is increasingly far from being an area of exhausted possibilities, each moment proposing important innovations that need a presentation, discussion and maturation space that is comprehensive and above all inter and transdisciplinary. Presently the disciplinary areas where the textile area is present are increasing and important, such as fashion, home textiles, technical clothing and accessories, but also construction and health among others, and can provide new possibilities and different disciplinary areas, allowing the production of new knowledge. D_TEX proposes to join the thinking of design with technologies, tradition, techniques and related areas in a single space where ideas are combined with the technique and with the projectual and research capacity, thus providing for the creation of concepts, opinions, associations of ideas, links and connections that allow the conception of ideas, products and services. The interdisciplinary nature of design is a reality that fully reaches the textile material in its essence and its practical application through the synergy and contamination by the different interventions that make up the multidisciplinary teams of research. The generic theme of D_TEX Textile Design Conference 2017 held at Lisbon School of Architecture of the University of Lisbon, Portugal on November 2-4, 2017 is Design the Future, starting from the crossroads of ideas and debates, a new starting point for the exploration of textile materials, their identities and innovations in all their dimensions.

Toward a Living Architecture? Christina Cogdell, 2019-01-01. A bold and unprecedented look at a cutting edge movement in architecture. Toward a Living Architecture is the first book-length critique of the emerging field of generative architecture and its nexus with computation, biology and complexity. Starting from the assertion that we should take generative architects

rhetoric of biology and sustainability seriously Christina Cogdell examines their claims from the standpoints of the sciences they draw on complex systems theory evolutionary theory genetics and epigenetics and synthetic biology She reveals significant disconnects while also pointing to approaches and projects with significant potential for further development Arguing that architectural design today often only masquerades as sustainable Cogdell demonstrates how the language of some cutting edge practitioners and educators can mislead students and clients into thinking they are getting something biological when they are not In a narrative that moves from the computational toward the biological and from current practice to visionary futures Cogdell uses life cycle analysis as a baseline for parsing the material energetic and pollution differences between different digital and biological design and construction approaches Contrary to green tech sustainability advocates she questions whether quartzite based silicon technologies and their reliance on rare earth metals as currently designed are sustainable for much longer challenging common projections of a computationally designed and manufactured future Moreover in critiquing contemporary architecture and science from a historical vantage point she reveals the similarities between eugenic design of the 1930s and the aims of some generative architects and engineering synthetic biologists today Each chapter addresses a current architectural school or program while also exploring a distinct aspect of the corresponding scientific language theory or practice No other book critiques generative architecture by evaluating its scientific rhetoric and disjunction from actual scientific theory and practice Based on the author s years of field research in architecture studios and biological labs this rare field building book does no less than definitively unsparingly explain the role of the natural sciences within contemporary architecture
