Biomedical Engineer Responsibilities:

Engineering Flesh: Towards Professional Responsibility for 'Lived Bodies' in Tissue Engineering, 2008 Engineering Flesh
Towards professional responsibility for lived bodies in Tissue Engineering This study analyses the work of biomedical engineers as normative work that affects people's daily lives as bodies In biomedical engineering engineers study bodies as machine like objects and develop technologies from such a perspective However in daily life patients live their bodies not as machine like but as themselves Biomedical engineering can be said to involve normative work because it affects the way people experience and live their bodies For example imaging technologies used to follow the development of a foetus during pregnancy stimulate the perception of the foetus as an individual human being and change the related conceptions of good professional care and responsible parenthood In this light I raise the question as to how biomedical engineers can take and shape professional responsibility for this kind of normative work with respect to bodies To study normative work in biomedical engineering I have analysed the practice of tissue engineering TE In this practice engineers rather literally make human body parts TE has as objective to create living body part substitutes e.g skin heart valves and bladders by using cells In the tradition of Science and Technology Studies STS I have studied normative work in TE empirically by following a specific TE project namely a TE heart valve project through participant observations interviews and other fieldwork approaches To be able to analyse how the practice of TE affects lived bodies I draw on work in the philosophical tradition of phenomenology This tradition has as central concept the lived body rather than the body as object In this book I show how TE implies normative work for engineers in the presentation of their work in terms of mimicking nature in making standards for TE heart valves and in developing networks to stimulate the further development of TE and to enable the impleme
