An advanced introduction to the field of structural bodywork which focusses on the issues of postural and functional dysfunction. The text builds on the theories of Ida Rolf, Rolfing and Feldenkrais and reviews them in the broader context of massage therapy and other complementary therapies based on bodywork techniques including chiropractic. The book is in 3 main parts. Part 1 looks at the background of structural bodywork and how it has developed before defining it as it is understood today. Part 2 looks at the theory of structural body work in more depth and relates it to human anatomy and clinical presentations. It draws together various strands of theory and practice which have not been considered together before but are all related to bodywork practice. Part 3 is a major part of the book and is a practical guide to structural bodywork techniques. This latter section is highly illustrated with photographs and line drawings. Content is highly readable, academically sound and grounded firmly in bodywork practice. Previously unrelated theories are discussed and applied to practice. The well known theories of Rolf and Feldenkrais are reviewed. A comprehensive practical manual section provides numerous techniques and models for a variety of musculoskeletal skeletal problems. Numerous illustrations provide a better understanding of text content.
