### Multiple Choice

Identify the choice that best completes the statement or answers the question.

## Chemistry 3 & 4, Chapter 2

### Multiple Choice

Identify the choice that best completes the statement or answers the question.

1. For a substance to be suitable as a primary standard in a volumetric analysis, it should have:
- A a known formula with a low molar mass.
  - B a very low melting point
  - C no tendency to absorb moisture from the air
  - D no acid–base or redox properties.

**ANSWER:** C

**POINTS:** 0 / 1

**FEEDBACK:** In most volumetric analyses, the primary standard must be an acid, a base, an oxidant or a reductant. Since it must be a solid at room temperature so that it can be accurately weighed out, it needs to have a relatively high MP. Since it must be accurately weighed out, it should not absorb any substance from the air. But a low molar mass means that there will be a higher percentage of error should the measured mass differ from the true mass by, for example, 0.005 g.

2. In a volumetric analysis of vinegar to determine the concentration of ethanoic acid present, a pair of students obtained the following results:

Initial burette reading (mL)	0.10	0.15	0.00	0.25	0.30
Final burette reading (mL)	22.70	22.60	22.50	22.73	22.60

The mean titre is:

- A 22.60 mL
- B 22.48 mL
- C 22.477 mL
- D 22.47 mL

**ANSWER:** B

**POINTS:** 0 / 1

**FEEDBACK:** The titres are 22.60, 22.45, 22.50, 22.48 and 22.30 mL respectively. The concordant results are 22.45, 22.48 and 22.50 mL. The mean of these is 22.48 mL, since a mean cannot have more decimal places than the results used to calculate it.
