Physics Philosophy And Quantum Technology:

Reality Without Realism Arkady Plotnitsky,2022-01-01 This book presents quantum theory as a theory based on new relationships among matter thought and experimental technology as against those previously found in physics relationships that also redefine those between mathematics and physics in quantum theory The argument of the book is based on its title concept reality without realism RWR and in the corresponding view the RWR view of quantum theory The book considers from this perspective the thinking of Bohr Heisenberg Schrödinger and Dirac with the aim of bringing together the philosophy and history of quantum theory With quantum theory the book argues the architecture of thought in theoretical physics was radically changed by the irreducible role of experimental technology in the constitution of physical phenomena accordingly no longer defined independently by matter alone as they were in classical physics or relativity Or so it appeared For quantum theory the book further argues made us realize that experimental technology beginning with that of our bodies irreducibly shapes all physical phenomena and thus makes us rethink the relationships among matter thought and technology in all of physics

Compendium of Quantum Physics Daniel Greenberger,Klaus Hentschel,Friedel Weinert,2009-07-25 With contributions by leading quantum physicists philosophers and historians this comprehensive A to Z of quantum physics provides a lucid understanding of key concepts of quantum theory and experiment It covers technical and interpretational aspects alike and includes both traditional and new concepts making it an indispensable resource for concise up to date information about the many facets of quantum physics

The Found and the Made Dan Bruiger,2017-07-05 This book critically examines how mathematical modelling shapes and limits a scientific approach to the natural world and affects how society views nature It questions concepts such as determinism reversibility equilibrium and the isolated system and challenges the view of physical reality as passive and inert Dan Bruiger argues that if nature is real it must transcend human representations In particular it can be expected to self organize in ways that elude a mechanist treatment This interdisciplinary study addresses several key areas the crisis in modern physics and cosmology the limits and historical psychological and religious roots of mechanistic thought and the mutual effects of the scientific worldview upon society's relationship to nature Bruiger demonstrates that there is still little place outside biology for systems that actively self organize or self define Instead of appealing to multiverses to resolve the mysteries of fine tuning he suggests that cosmologists look toward self organizing processes He also states that physics is hampered by its external focus and should become more self reflective If scientific understanding can go beyond a stance of prediction and control it could lead to a relationship with nature more amenable to survival The Found and the Made fills a void between popular science writing and philosophy It will appeal to naturalists environmentalists science buffs professionals and students of cultural history evolutionary psychology gender studies and philosophy of mind

How the World Computes Barry S. Cooper,Anuj Dawar,Benedikt Löwe,2012-05-28 This book constitutes the refereed proceedings of the Turing Centenary Conference and

the 8th Conference on Computability in Europe CiE 2012 held in Cambridge UK in June 2012 The 53 revised papers presented together with 6 invited lectures were carefully reviewed and selected with an acceptance rate of under 29.8% The CiE 2012 Turing Centenary Conference will be remembered as a historic event in the continuing development of the powerful explanatory role of computability across a wide spectrum of research areas The papers presented at CiE 2012 represent the best of current research in the area and forms a fitting tribute to the short but brilliant trajectory of Alan Mathison Turing Both the conference series and the association promote the development of computability related science ranging over mathematics computer science and applications in various natural and engineering sciences such as physics and biology and also including the promotion of related non scientific fields such as philosophy and history of computing [The Quantum World](#) Bernard d'Espagnat, Hervé Zwirn, 2017-05-08 In this largely nontechnical book eminent physicists and philosophers address the philosophical impact of recent advances in quantum physics These are shown to shed new light on profound questions about realism determinism causality or locality The participants contribute in the spirit of an open and honest discussion reminiscent of the time when science and philosophy were inseparable After the editors introduction the next chapter reveals the strangeness of quantum mechanics and the subsequent discussions examine our notion of reality The spotlight is then turned to the topic of decoherence Bohm's theory is critically examined in two chapters and the relational interpretation of quantum mechanics is likewise described and discussed The penultimate chapter presents a proposal for resolving the measurement problem and finally the topic of loop quantum gravity is presented by one of its founding fathers Carlo Rovelli The original presentations and discussions on which this volume is based took place under the auspices of the French Académie des Sciences Morales et Politiques The book will appeal to everybody interested in knowing how our description of the world is impacted by the results of the most powerful and successful theory that physicists have ever built

Irreducibility and Computational Equivalence Hector Zenil, 2012-12-25 It is clear that computation is playing an increasingly prominent role in the development of mathematics as well as in the natural and social sciences The work of Stephen Wolfram over the last several decades has been a salient part in this phenomenon helping founding the field of Complex Systems with many of his constructs and ideas incorporated in his book *A New Kind of Science* ANKS becoming part of the scientific discourse and general academic knowledge from the now established Elementary Cellular Automata to the unconventional concept of mining the Computational Universe from today's widespread Wolfram's Behavioural Classification to his principles of Irreducibility and Computational Equivalence This volume with a Foreword by Gregory Chaitin and an Afterword by Cris Calude covers these and other topics related to or motivated by Wolfram's seminal ideas reporting on research undertaken in the decade following the publication of Wolfram's NKS book Featuring 39 authors its 23 contributions are organized into seven parts Mechanisms in Programs Nature Systems Based on Numbers Simple Programs Social and Biological Systems Technology Fundamental Physics The Behavior of Systems the Notion of Computation
