reported in important international science education journals with respect to Feyerabend's epistemological anarchism. The book includes an evaluation of general chemistry and physics textbooks. Most science curricula and textbooks provide the following advice to students: Do not allow theories in contradiction with observations and all scientific theories must be formulated inductively based on experimental facts. Feyerabend questioned this widely prevalent premise of science education in most parts of the world and in contrast gave the following advice: Scientists can accept a hypothesis despite experimental evidence to the contrary and scientific theories are not always consistent with all the experimental data. No wonder Feyerabend became a controversial philosopher and was considered to be against rationalism and anti-science. Recent research in philosophy of science however has shown that most of Feyerabend's philosophical ideas are in agreement with recent trends in the 21st century. Of the 120 articles from science education journals evaluated in this book, only 9% recognized that Feyerabend was presenting a plurality of perspectives based on how science really works. Furthermore, it has been shown that Feyerabend could even be considered as a perspectival realist. Among other aspects, Feyerabend emphasized that in order to look for breakthroughs in science, one does not have to be complacent about the truth of the theories but rather has to look for opportunities to break rules or violate categories. Mansoor Niaz carefully analyses references to Feyerabend in the literature and displays the importance of Feyerabend's philosophy in analyzing historical episodes. Niaz shows through this remarkable book a deep understanding to the essence of science. Calvin Kalman, Concordia University, Canada. In this book, Mansoor Niaz explores the antecedents, context, and features of Feyerabend's work and offers a more nuanced understanding than reviews and considers its reception in the science education and philosophy of science literature. This is a valuable contribution to scholarship about Feyerabend with the potential to inform further research as well as science education practice. David Geelan, Griffith University, Australia.
