

APES Math Review

The APES Examination will require you to do mathematical calculations. Occasionally these calculations may be somewhat esoteric, and you may find it possible to do them in your head; nonetheless, it is mandatory to show all work for all calculations on the free-response section of the APES exam. This worksheet is designed to help prepare you for the type of calculations you may encounter on this year's APES exam.

For each problem show every step of your work, and indicate the cancellation of all units.

Scientific Notation

All APES students should be able to work comfortably with numbers in scientific notation. Place the following numbers into scientific notation.

1. one billion 1×10^9
2. 70 trillion 7×10^{13}
3. 0.00025 2.5×10^{-4}
4. twenty three thousand 2.3×10^4
5. three hundred 3×10^2
6. 7,310,000 7.31×10^6

Perform the following calculations in scientific notation.

7. 1.3×10^2 divided by 3.6×10^2
 0.36111111×10^0
8. $\frac{5.8 \times 10^{22}}{1.2 \times 10^{22}}$
9. $1.11 \times 10^{-9} (6.0 \times 10^9) = 6.66 \times 10^0$

Metric Conversions

All APES students should be comfortable converting between common metric prefixes. Below are common prefixes, and the number of base units each represents. For example, 1 teraWatt = 10^6 Watts; 1 millimeter = 10^3 meters

n = nano = 10^9

= micro = 10^6

m = milli = 10^3

How Can Development and Plasticity Contribute to Understanding Evolution of the Human Brain? Roberto Lent, Fernanda Tovar-Moll, 2016-07-19 Humans usually attribute themselves the prerogative of being the pinnacle of evolution They have large brains with many billion neurons and glial cells trillions of synapses and besides all a plastic hardware that may change either subtly or strongly in response to the external environment and internal mental commands With this hypercomplex apparatus they are capable of very sophisticated inward computations and outward behaviors that include self recognition metacognition different forms of language expression and reception prediction of future events planning and performing long streams of motor acts subtle emotional feelings and many other surprising almost unbelievable properties The main challenge for research is how do we explain this gigantic achievement of evolution Is it a direct consequence of having acquired a brain larger than our primate ancestors with huge numbers of computational units Would it be determined by a particular way these units came to relate to each other building up logic circuits of powerful capacities What along development has made the difference for the construction of such a complex brain machine How much of this complexity is innate how much is sculpted by influence of the external world by social interaction with our human fellows and by the history of our own mental trajectory along life Many specific questions can be asked albeit not necessarily answered so far to this purpose

- 1 which genomic characteristics make us unique among primates
- 2 which of developmental events during and beyond embryogenesis define our brain prolonged neurogenesis permanent circuit re formation dynamic synaptogenesis regressive sculpting of the hardware all of them
- 3 is there anything special about plasticity of the human brain that allows us to build the exquisite individual variability characteristic of our brains

Neuroscience is in need of a synthesis Perhaps associating concepts derived from developmental neurobiology with evolutionary morphology and physiology together with those that photograph the human brain in action under influence of the external world would turn on a light at the end of the

tunnel and we would be able to understand what humans do have that is special if anything to explain our success in the Earth **The Yale Alumni Weekly** ,1908 From Apes to Angels Phillip V.
