Autonomous Real-Time Testing Thomas Michael Fehlmann, 2020-01-17 Software testing is becoming increasingly important because more and more products are software intensive Cars for example contain more and more control software ECUs that are networked with each other With new rail vehicles software problems delay commissioning by months even years because the different components are not coordinated with each other A timely system test would help but there is a lack of time and resources The functionality of the software is simply too great So you must automate Automation is not only necessary for the execution of tests but above all for the generation of suitable test cases This is possible with Combinatory Logic the Analytic Hierarchy Process AHP and Quality Function Deployment QFD When today's cars use map services from the cloud or their own sensors for an Advanced Driving Assistance System ADAS to perform driving decisions or when in the future an autonomous car meets another or with truck platooning or when adding a new previously unknown device to an IoT orchestra the original
