Design is an important research topic in engineering and architecture since it is not only a means of change but also one of the keystones of economic competitiveness and the fundamental precursor to manufacturing. However, our understanding of design as a process and our ability to model it are still very limited. The development of computational models founded on the artificial intelligence paradigm has provided an impetus for much of current design research, both computational and cognitive. Notwithstanding their immaturity, noticeable advances have been made both in extending our understanding of design and in developing tools based on that understanding.
