

5.1 Introduction to fiber optics

An optical fiber is a hair thin cylindrical fiber made of glass or any transparent dielectric material. It is used for optical communication as a waveguide. It transmits signals in form of light. The optical fiber optical communication system is shown in Fig 5.1.

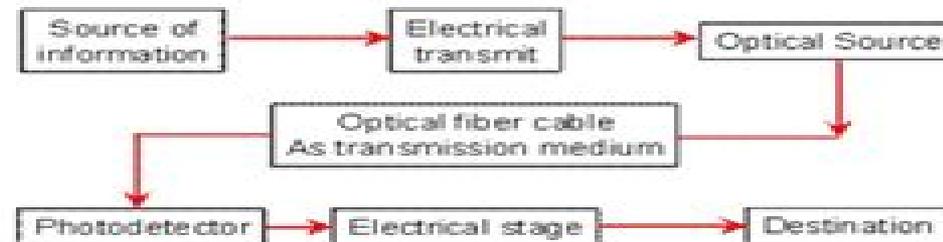

Fig.5.1 optical fiber optical communication system

Optical fiber is backbone of communication system it carry a signal with a speed up to 1Tbit/sec or 100 million conversation simultaneously.

5.1.1 Structure of optical fiber

Core- Central tube of very thin size made up of optically transparent dielectric medium and carries the light form transmitter to receiver.

Cladding- Outer optical material surrounding the core having refractive index lower than core. It helps to keep the light within the core throughout the phenomena of total internal reflection.

Engineering Physics Notes For Fibre Optics:

NBS Technical Note ,1981 **Wavelength Filters in Fibre Optics** Herbert Venghaus,2006-09-21 Information and communication technologies have been growing and developing steadily for as long as any of us can remember Growth was particularly strong in the last few decades and fibre optic communication systems have become predominant whenever information is to be transmitted over medium or long distances Even when the telecommunication bubble burst at the beginning of the new millennium the only thing which vanished was the expectation of making a fortune by buying and reselling telecom device and equipment manufacturing companies the upgrading of existing fibre optic links and the deployment of new ones continued unabated The reason for the predominance of communication via optical fibres is the vast amount of information a single fibre can carry However in order to take advantage of this potential it is mandatory to transmit different wavelength channels simultaneously over a single optical fibre and the handling of these wavelength channels requires wavelength selective devices or wavelength filters Among the functionalities optical filters have to accomplish are the selection of single or several channels out of a larger number of channels the separation of one channel wavelength from unwanted spurious noise at different wavelengths filters have to support routing enable the lossless or low loss combination of wavelengths and they have to compensate for wavelength dispersion effects **Applied Physics II | AICTE Prescribed Textbook - English** Hussain Jeevakhan,2021-11-01 1 Applied Physics II With Lab Manual by Hussain Jeevakhan 789391505578 DIP126EN Applied Physics II is a basic science course in the first year of the Diploma program in Engineering Technology Contents of this book are stringently aligned as per model curriculum of AICTE and incorporated with the concepts of outcomes based education OBE Book covers seven topics Wave motion Optics Electrostatics Current electricity Electromagnetism semiconductor physics and Modern physics Each topic and its subtopics are written from the perspective of a student's learning and in accord with the NEP 2020 guidelines Every unit comprises a set of activities and exercise at the end to assist the student's learning Some salient features of the book | Unit Outcomes of each unit are mapped with Course Outcomes and Programs Outcomes | Book Provides relevant interesting facts QR Code for E resources and use of ICT and suggested micro projects activities in each unit | Content presented in book in chronological way | Figures tables and equations are given to improve clarity of the topics | Solved examples are given with systematic steps | MCQs short and long answer questions and unsolved problems of understanding and above levels Bloom's Taxonomy are given for learning reinforcement of students and as per OBE **Developments in Heat Transfer** Marco Aurelio Dos Santos Bernardes,2011-09-15 This book comprises heat transfer fundamental concepts and modes specifically conduction convection and radiation bioheat entransy theory development micro heat transfer high temperature applications turbulent shear flows mass transfer heat pipes design optimization medical therapies fiber optics heat transfer in surfactant solutions landmine detection heat exchangers radiant floor packed bed thermal storage systems inverse space marching method heat transfer in
